5. TEST SAMPLES

5.1. Sample and Assembly Description

The 5500 x 4550mm (h x w) intermediate scale multi-story assembly (ISMA) test wall was constructed of a base wall onto which Aluminium support brackets were fixed, anchored into the studs of the base wall. Vertical and horizontal Aluminium runners were fixed to the support brackets, and Aluminium panel hooks were fixed to the vertical runners.

5.1.1. BASE WALL

The base wall was composed of a layer of 15.9mm thick Type-X gypsum boards fixed on either side of a galvanized steel framing system consisting of vertical studs and horizontal tracks. The boards were fixed with steel drywall screws, and the meeting edges of all gypsum boards were covered with fiber jointing tape and gypsum jointing compounds.

5.1.2. ALUMINIUM WALL BRACKETS

A single length of wall bracket were used on the specimen. They were fixed to the exterior face of the base wall, anchored in the galvanized steel framing system of the base wall using stainless steel self-drilling screws.

5.1.3. ALUMINIUM CONNECTORS

The connectors were fixed at the junction of the horizontal and vertical runners using stainless steel screws to join them together.

5.1.4. ALUMINIUM RUNNER SYSTEM

The runner system consisted of extruded Aluminium tubes fixed vertically and horizontally to the Wall Brackets using stainless steel hex. Head bolt and nut. Horizontal and vertical runners were joined together using Aluminium Connectors, which were fixed using stainless steel screws.

5.1.5. ALUMINIUM L-ANGLE RUNNERS – VERTICAL EDGES OF THE SPECIMEN

L-shaped angles were fixed along the height of the base wall at the vertical edges to the exterior face of the base wall, anchored in the galvanized steel framing system of the base wall using stainless steel self-drilling screws.

5.1.6. EXTERIOR INSULATION & CAVITY FIRE BARRIER

Mineral wool (Rockwool) insulation was fixed to the exterior face of the base wall using insulation supports. It covered the entire exterior face of the base wall, except for in the location of the cavity fire barriers. The cavity fire barriers consisted of strips of mineral fiber insulation, fixed to the exterior of the base wall horizontally at the location of the window perimeter and along the first and second storey floor slabs. It was fixed using galvanized steel insulation supports.

5.1.7. ALPOLIC™ FR 4MM THICK ALUMINIUM COMPOSITE PANELS

The Aluminium Composite Panels (ACP) were made using 4mm thick Alpoli[™] FR ACP material folded into tray profiles. The panels were fixed to the vertical and horizontal runner profiles via extruded aluminum panel cleats, which were riveted within the bend of the tray profile. Similar extruded Aluminium profiles and ACP trimmings were used in the corners of the tray profiles to reinforce and support the bends, and were also fixed using rivets.

5.1.8. PANEL GAP INSULATION

Vedafeu Cordon-12 Firestop Rope which was friction fitted into the horizontal and vertical gaps (10mm) between adjacent panels. Once put in place, it was covered with Dow Corning Firestop 700 fire rated Silicone, extruded smoothly and made flush with the exterior face of the specimen.

5.1.9. WINDOW AND PERIMETER DETAIL

Aluminium Composite Panels at the window aperture and at the perimeter of the specimen had a larger bend enough to cover the depth of the specimen up to the base wall.

Along the interior top edge of the window opening, an Aluminium L-angle was fixed over the ACP corner using stainless steel self-drilling screws.

5.2. Supporting Construction

The test assembly was installed on a moveable test frame constructed of 150 x 150mm steel I-beams with 3 Nos. of 100 x 100mm steel angles welded horizontally at locations specified by the standard.

The assembly was secured onto the laboratory's intermediate scale multi-story test apparatus (ISMA) and the gaps were filled with ceramic fiber blanket with a density of 128 kg/m³.

6. SPECIMEN VERIFICATION

6.1. Specimen Definition

The laboratory has not been involved in the selection of the specimen.

The choice and the definition of the specimen have been made by the Mitsubishi Chemical Corporation.

6.2. Specimen Installation

Installation of the specimen: United Colour Film L.L.C.

Frame and base wall preparation: TBWIC

7. METHOD OF TEST

7.1. Verification of the Test Specimen

The construction has been verified by TBWIC based on a detailed survey and with the technical information provided by Mitsubishi Chemical Corporation.

The Alpolic™ FR 4mm thick Aluminium Composite Panels were marked and signed by Mr. Azel Joquino from TBWIC Certification (Certification Body) on 30-May-17 as part of the product certification process.

7.2. Conditioning and Moisture

The specimen was delivered on 10-Jul-17 and installed from 10-Jul-17 to 13-Jul-17. The specimen was covered with tarpaulin after installation and stored in ambient conditions at temperatures ranging between 35°C and 45°C and 14% to 59% humidity.

7.3. Instrumentation

The interior thermocouples fixed within the specimen were placed at mid-depth of the air cavity, nominally 195mm from the interior face of the base wall, as per figure 6.1(b), Detail H in the NFPA 285 standard, shown in Appendix 1, Figure 4 of this report.

8. CALIBRATION

The calibration for the test rig was performed on November 17, 2016 and followed the procedure and practices outlined for calibration in NFPA 285:2012, Chapter 7.

Table 1 shows the average heat flux and table 2 shows the average temperature obtained during the calibration test. The values are within the allowable ranges as specified in table 7.1.11 ($\pm 10\%$ allowable tolerance).

Time Interval (min)	Average Heat Flux 2FT (W/cm ²)	Average Heat Flux 3FT (W/cm ²)	Average Heat Flux 4FT (W/cm ²)
0:00-5:00	0.76	0.81	0.62
5:00-10:00	1.55	2.10	1.38
10:00-15:00	2.99	2.58	1.94
15:00-20:00	3.10	2.97	2.00
20:00-25:00	4.10	3.29	2.58
25:00-30:00	4.54	3.85	2.73

Table 1: Average heat flux values for the time period indicated.

Time Interval (min)	Avg. Burn Room Temp (°F)	Avg. Int. Wall Temp (°F)	Avg. 1 FT Temp (°F)	Avg. 2 FT Temp (°F)	Avg. 3 FT Temp (°F)	Avg. 4 FT Temp (°F)	Avg. 5 FT Temp (°F)	Avg. 6 FT Temp (°F)
0:00-5:00	1154	1110	675*	691	653	601	532	477
5:00-10:00	1353	1332	1038*	1039	1025	943	841	749
10:00-15:00	1447	1441	1113*	1118	1097	1047	957	865
15:00-20:00	1522	1532	1161*	1165	1132	1069	970	888
20:00-25:00	1592	1636	1190*	1236	1217	1147	1029	937
25:00-30:00	1641	1729	1215*	1253	1260	1203	1071	969

*Some values obtained during the calibration were slightly above the limit. These values represent a more severe test scenario.

Table 2: Average temperature values for the time period indicated.

9. FIRE TEST

9.1. Conditions and Test Situation

The fire test was carried out according to NFPA 285; 2012 Edition

9.2. Measurements (for graphs and data, refer to Appendix 5 & 6)

The specimen was fitted with 54 Type-K thermocouples which were distributed as per the diagram in Appendix 1.

A 100 channel Agilent 34970A data logger was used to record the output of the thermocouples on 15 second intervals.

The window burner was centered on the vertical centerline of the window, 9 inches below the top of the opening, and with the longitudinal centerline of the burner at 3.5 inches from the plane of the exterior wall, consistent with the standard and the calibration of the test apparatus.

The assembly was tested based on the values obtained during the calibration as per the NFPA 285 standard.

The burn room thermocouples were placed at 6 inches below the first story test room ceiling and distributed according to NFPA 285; Fig. 6.1(d)

The ambient temperature at the commencement of the test was recorded as 93.92 °F and the relative humidity was recorded as 39%. The airflow, measured with an anemometer placed at a right angle and within 1 meter of the test face, at the beginning at test was recorded at less than 0.1 m/s. Video recording digital photographs, visual observations and data collection were performed prior, during, and after testing was completed.

Note: The starting ambient temperature for the test was higher than the allowable 90°F specified in the NFPA 285 standard. However, the test was completed at the lowest available temperature over a 24 hour period.

9.3.Pre-Test Observations

The specimen was found satisfactory and fit to be tested.

9.4.Fire Test Observations

Time (min:sec)	Observations From In Front of the Specimen (Exterior Face)
0:00	The test was started.
3:00	Coating over the panel back bends along the window aperture began to peel off.
4:30	Panels along the window aperture began to bulge out along the window head.
5:00	The window burner was ignited.
5:10	Coating over the panels up to 3 feet above the window head began to peel off.
8:05	Flaming was observed on the sealant along the center joint of the panels 3 feet above the window head.
10:00	The specimen was stable.
10:43	Flaming was observed on the sealant along the center joint of the panels 4 feet above the window head.
11:00	Panels along the window aperture began to sag along the window head.
15:00	The specimen was stable.
15:37	The core material from the panels along the window head began to fall.
16:00	The core material from the panels above the window aperture began to fall off and were observed to have melted through up to 4 feet above the window head.
17:00	Flaming was observed on the sealant along the center joint of the panels 6 feet above the window head.
18:00	Flaming was observed at the top corners of the window aperture.
19:00	The core material was observed to be falling off continuously. Inner skin of the panels were also observed to be melted and dripping down exposing the external insulation up to 4 feet above the window head.
20:00	The specimen was stable.
21:00	The core material that fell onto the floor and window sill were observed to be burning.
25:00	The specimen was stable.

30:00	The specimen was stable, the test was stopped and gas shut off, as per the NFPA 285 Standard, and the 10 minute observation period began.
30:01	The core material along the window vertical edges and sill was observed to be burning.
32:00	The flaming along the vertical edges of the window sill referenced at 30:01 had ceased.
35:00	The flaming referenced at 30:01, except the flaming along the sill had ceased.
40:00	The observation period was ended as per the NFPA 285 standard and the NFPA 285 test was completed. Flaming of the core material along the sill continued beyond the observation period and had ceased after 9 minutes from the end of the observation period.

9.5. Second Floor Test Room Observations

Time (min:sec)	Observations From The 2 nd Floor Room (Interior Face)
0:00	The test was started
10:00	The 2 nd floor room was stable, no flaming was observed.
15:00	The 2 nd floor room was stable, no flaming was observed.
20:00	The 2 nd floor room was stable, no flaming was observed.
25:00	The 2 nd floor room was stable, no flaming was observed.
30:00	The 2nd floor room was stable, no flaming was observed, the test was stopped and gas shut off, as per the NFPA 285 Standard, and the 10 minute observation period began.
35:00	The 2 nd floor room was stable, no flaming was observed.
40:00	The observation period was ended as per the NFPA 285 standard and the NFPA 285 test was completed.

10. EXTENT OF DAMAGE

10.1. Exterior Face Observations

1. The panels 4 feet right above the window head had melted through, exposing the external insulation.
2. The panels above and to either sides of the burned areas were observed to be delaminated.
3. The panels above the window head up to the top end of the specimen extending beyond the 5 feet mark horizontally from the window centerline and had slightly delaminated.

10.2. Interior Face Observations

The 2nd storey room was stable and intact.

10.3. Dismantling Observations

The Aluminium foil scrim of the exterior insulation up to 6 ½ feet had melted and burned away.

11. FIRE PROPOGATION ANALYSIS

Test Performance Evaluation Summary Table		
Test Requirement	Test Observation	Pass/Fail
Flames emitting from the surface of the exterior face of the test specimen shall not reach a height of 10ft or greater above the top of the window opening.	Flames did not reach 10 feet above the window opening.	Pass
Flames emitting from the surface of the exterior face of the test specimen shall not reach a horizontal distance of 5ft or greater from the vertical centerline of the window opening.	Flames did not reach a lateral distance of 5ft from the vertical centerline.	Pass
Flames shall not occur in the second-story test room.	There was no visible flaming in the second story test room.	Pass
Temperatures shall not exceed 1000°F as measured by thermocouples Tc-11 and Tc-14 through Tc-17.	Tc-11 and Tc-14 through Tc-17 did not exceed the 1000°F limit.	Pass
Temperatures in the wall cavity air space shall not exceed 1000°F as measured by thermocouples Tc-18 and Tc-19.	Tc-18 and Tc-19 did not exceed the 1000°F limit.	Pass
Temperatures in the wall cavity air space shall not exceed 1000°F as measured by thermocouples Tc28 and Tc-31 through 40.	Tc-28 and Tc-31 through Tc-40 did not exceed the 1000°C limit.	Pass
Temperatures measured 1 in. (25mm) from the interior surface of the test specimen within the second story test room shall not exceed 500 °F above ambient air temperature of test facility at the start of fire test as measured by Tc-49 through Tc-54.	Tc-49 through Tc-54 did not exceed the maximum temperature of 593.92°F. (500°F + Initial Ambient Temperature = 500°F + 93.92°F = 593.92°F)	Pass

12. SUMMARY OF RESULTS

The 4mm thick Alpolic™ FR Aluminium Composite Panel cladding assembly has been evaluated in accordance with NFPA 285; Standard Test Method for Evaluation of Fire Propagation Characteristic of Exterior Non load-bearing Wall Assemblies Containing Combustible Components, 2012 Edition.

The results of the fire performance evaluation conducted on the wall assembly described herein indicate that the assembly met the acceptance criteria stated in the standard.

13. LIMITATION

The results are only applicable to the type and orientation of the installation which relate to what has been tested. No uncertainty factors have been considered or covered in this test report for the test assembly stated herein given a large scale fire.

14. RECOMMENDATION

Thomas Bell-Wright International Consultants recommend that the relevance of test reports should be considered after a period of five years.

17. APPENDIX 3 – COMPONENTS DESCRIPTION

A. Base Wall:

Studs	
Material	Galvanized Steel
Manufacturer	JB Mechanical Services
Dimension	93 x 32 x 34 x 9 x 1.2 mm [web x flange (1) x flange (2) x return lip x thickness]
Fixing method & Application	Studs were fixed at edge of the wall span and nominally spaced to match the distribution of the Aluminium wall brackets (see drawings in Appendix 4). The top and bottom edges were welded within tracks at the head and sill of the base wall. The studs were also welded onto the horizontal angle bars of the test frame at every intersection.
Evidence of survey	Information provided by TBWIC.

Tracks	
Material	Galvanized Steel
Manufacturer	JB Mechanical Services
Dimension	95 x 32 x 1.2 mm (web x flange x thickness)
Fixing method & Application	The tracks were welded directly onto the test frame along the bottom edge (sill) and also onto the studs at the intervals provided by the sponsor for the spacing of the Aluminium wall brackets. The tracks were placed along the top and bottom of the framing system. Tracks were used along the window opening, too.
Evidence of survey	Information provided by TBWIC.

Interior/Exterior Wall Lining	
Material	Gypsum Board
Manufacturer	Knauf LLC
Reference	15.9mm Type X (GW-TX)
Dimension	1220 x 2400 x 15.9 mm (w x h x t)
Fixing method & Application	The boards were fixed with Knauf self-tapping screws TB 3.5 x 35mm self-tapping screws, screwed at nominal distance of 300mm C/C vertically on each stud.
Evidence of survey	Information provided by TBWIC.

Jointing Tape	
Manufacturer	Knauf LLC
Reference	Knauf Joint Tape
Dimensions	50 mm wide
Fixing method & Application	Applied along the meeting edges between the gypsum boards and was embedded into the jointing compound on both the interior and exterior faces of the base wall.
Evidence of survey	Information provided by TBWIC.

Jointing Compound	
Manufacturer	Knauf LLC
Reference	Knauf Readygips (Gypsum based filler)
Fixing Method & Application	First coat of Knauf Readygips (gypsum based filler) was applied along the joints between the boards. Knauf Joint Tape was embedded into the joint filler and then two more passes of joint filler were applied along the 15.9mm thk. boards after allowing for appropriate drying times. Three separate coats of joint filler were applied over each screw head. The tape and jointing compound were also applied to the inside of the exterior face of specimen at the request of the test sponsor.
Evidence of survey	Information provided by TBWIC.

B. Framing System:

Aluminium Wall Bracket	
Material	Extruded Aluminium T6-6063
Fabricator	United Colour Film L.L.C.
Reference	Aluminium Wall Bracket
Thickness	3mm
Fixing Method & Application	The wall brackets were fixed to the base wall using 3 Nos. of $\varnothing 4.8 \times 38$ mm long stainless steel pan head self-drilling screws, anchored into the galvanized steel framing system of the base wall. They were fixed both horizontally and vertically, and supported the Aluminium Runner Profiles via a single M8x80mm stainless steel hex head bolt, nut and washers.
Evidence of survey	Information provided by Sponsor and verified by TBWIC.

Aluminium Runner System	
Material	Extruded Aluminium Tube T6-6063
Fabricator	United Colour Film L.L.C.
Reference	Aluminium Runner Profile
Thickness	3mm I Cut to required length.
Fixing Method & Application	The Aluminium runner profiles were oriented both vertically and horizontally, and were fixed to the Aluminium wall brackets via a single M8x80mm stainless steel hex head bolt, nut and washers. They were also fixed horizontally via the same set of Aluminium Brackets and hex head bolts along the entire width of the base wall at the top and bottom edge. The Aluminum Panel Cleats on the ACPs were fixed to runners using $\varnothing 4.8 \times 25$ mm stainless steel pan head self-drilling screws and ultimately supported the panels on the framing system.
Evidence of survey	Information provided by Sponsor and verified by TBWIC.

Aluminium Runner Connector	
Material	Extruded Aluminium Tube T6-6063
Fabricator	United Colour Film L.L.C.
Reference	Aluminium Runner Profile
Thickness	Length – 40mm
Fixing Method & Application	The Aluminium connectors were used to join the vertical and horizontal runners together at their junctions. The connectors were fixed onto the runners using $\varnothing 4.8 \times 25$ mm long stainless steel pan head self-drilling screws
Evidence of survey	Information provided by Sponsor and verified by TBWIC.

Aluminium L-angles – Vertical edges of the base wall	
Material	Extruded Aluminium T6-6063
Manufacturer	United Colour Film L.L.C.
Thickness	3mm Cut to required length.
Fixing Method & Application	The Aluminium L-angles were oriented vertically along the vertical edges of the specimen using $\varnothing 4.8 \times 48$ mm long stainless steel pan head self-drilling screws, anchored into the galvanized steel framing system of the base wall. The aluminum panel cleats were fixed to L-angles using $\varnothing 4.8 \times 25$ mm stainless steel pan head self-drilling screws.
Evidence of survey	Information provided by Sponsor and verified by TBWIC.

C. Cavity Fire Barrier and Exterior Insulation:

Cavity Fire Barrier		
	Vertical	Horizontal
Material	Mineral Fiber	Mineral Fiber
Manufacturer	Siderise Insulation Ltd. – UK	
Reference	Siderise CH-CB (Constructed partially from Siderise CW-FS120)	
Dimensions	85 x 120mm (depth x h)	85 x 120mm (depth x h)
Density	Nominally 75 kg/m ³ (Stated)	Nominally 75 kg/m ³ (Stated)
Fixing Method & Application	Fixed vertically along the full height of the specimen at each vertical edge of the window opening using B65/110 galvanized steel brackets at 600mm C/C, as per Manufacturer guidelines.	Fixed horizontally at the sill and head of the window opening, as well as at the first and second storey floor slabs, using B65/110 galvanized steel brackets at 600mm C/C, as per Manufacturer guidelines.
Evidence of survey	Information provided by the sponsor and verified by TBWIC.	

Cavity Fire Barrier Fixings	
Material	Galvanized Steel
Manufacturer	Siderise Insulation Ltd. – UK
Reference	B65/110 galvanized steel brackets
Dimension	50 x 65 x 25 x 1mm (depth x h x w x thk.)
Fixing Method & Application	The insulation support brackets were pre-bent pieces of galvanized steel that were nominally 65mm high and extended 50mm from the exterior of the base wall and impaled the mineral fiber cavity fire barrier. They were fixed to the base wall using No. 8x1.5” steel pan head screws and were spaced nominally at 600mm C/C.
Evidence of survey	Information provided by the sponsor and verified by TBWIC.

Exterior Insulation & Fixings		
	Mineral Fiber	Insulation Fixing
Manufacturer	Fujairah Rockwool Factory	RAWL PLUG
Reference	S2XX	MBA-08090
Material	Mineral fiber slabs with foil scrim Kraft (FSK) on one side.	Galvanized Steel Pins
Density	80 kg/m ³ (Stated) 80.9 kg/m ³ (Measured)	N/A
Dimensions	Max: 1200x600x50 mm (l x w x thk.)	M8 x 90mm long
Fixing Method & Application	The 50mm thick slabs were fixed directly to the base wall using insulation fixings which were anchored directly into the base wall. The fixings had no particular spacing but were evenly distributed over each full size slab. Typically 5 fixings were used for each slab.	
Evidence of survey	Information provided by sponsor and verified by TBWIC.	

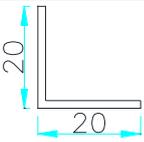

D. Cladding:

Exterior Cladding	
Material	4 mm thick Aluminium Composite Panel
Manufacturer	Mitsubishi Chemical Corporation
Reference	Alpolic™ FR Aluminium Composite Panel
Description	The “Tray Profile” Aluminum Composite Panels were made of 3mm thick mineral filled core, with one 0.5 mm thick sheet of Aluminium on either side. The panel corners were reinforced with an Aluminium strip of size 20 x 40 2mm (w x l x thk.) at 45° corners and with an ACP trimmings at 90° corners; both were fixed onto the panels using Ø3.8 mm Steel SRC blind rivets.
Dimension	PANEL-01 : L x W = 2270mm x 1113mm PANEL-02 : L x W = 2270mm x 1113mm PANEL-03 : L x W = 2270mm x 1500mm PANEL-04 : L x W = 2270mm x 1500mm PANEL-05 : L x W = 2270mm x 1300mm PANEL-06 : L x W = 2270mm x 1300mm PANEL-07 : L x W = 1278mm x 755mm PANEL-08 : L x W = 1278mm x 755mm PANEL-09 : L x W = 1278mm x 842mm PANEL-10 : L x W = 1278mm x 842mm
Fixing Method & Application	Aluminum panel support cleats of dimensions 20x20x40x2 mm (w x h x l x thk.) were fixed in the tray profiles of the ACP panels using Ø3.8 mm Steel SRC blind rivets at regular intervals. The panel support cleats were fixed to the vertical & horizontal Aluminum runner profiles using Ø4.8x25mm stainless steel self-drilling pan head screws. The horizontal and vertical gaps between adjacent panels were filled with Vedafeu-C firestop backer rope to hold the Dow Corning Firestop 700 fire rated Silicone Sealant over it. The sealant was extruded smoothly and made flush with the exterior face of the panels.
Evidence of survey	Information provided by Sponsor and verified by TBWIC.

Panel Corner Support		
Type of joint	45° Joint	90° Joint
Material	Aluminium strip	ACP Trimmings (L-Shaped)
Dimensions	40 x 20 x 1mm (l x w x thk.)	50 x 50 x 20 x 4mm (leg x leg x width x thk.)
Fixing Method & Application	Fixed using two Nos. of Ø3.8 steel SRC blind rivets.	Fixed using four Nos. of Ø3.8 steel SRC blind rivets.
Evidence of survey	Information provided by sponsor and verified by TBWIC.	

Aluminium Panel Cleat	
	
Material	Extruded Aluminium AA6063 T6
Manufacturer	United Colour Film L.L.C.
Reference	Aluminium Panel Cleat
Dimension	As shown Thickness – 2mm Length – 40mm
Fixing Method & Application	The panel cleats were riveted inside the tray profiles using two Nos. of Ø3.8mm steel SRC blind rivets per cleat, and nominally 450mm C/C. On the vertical panel edges, panel cleats were fixed directly to the Aluminium runner profiles using single Ø4.8x25mm long stainless steel pan head screws.
Evidence of survey	Information provided by Sponsor and verified by TBWIC.

Panel Gap Insulation	
Manufacturer	VEDA France
Reference	Vedafeu Cordon-12 Firestop Rope
Material	Core of fireproof and rot proof mineral fibers bound by an outer braiding of fiber glass thread.
Diameter	12mm
Fixing Method & Application	The Vedafeu Cordon-12 Firestop Rope was friction fitted into the horizontal and vertical gaps (10mm) between adjacent panels. Once put in place, it was covered with Dow Corning Firestop 700 fire rated Silicone, extruded smoothly and made flush with the exterior face of the specimen.
Evidence of survey	Information provided by sponsor and verified by TBWIC.

Sealant	
Manufacturer	Dow Chemical Company
Reference	Dow Corning Firestop 700
Description	Gray, silicone sealant
Fixing Method & Application	The Silicone sealant was used to fill gaps between adjacent panels, to cap the Vedafeu-C firestop rope. It was extruded smoothly and made flush with the exterior face of the specimen. It was also used on the edges of the window detailing around the perimeter of the window opening.
Evidence of survey	Information provided by sponsor and verified by TBWIC.

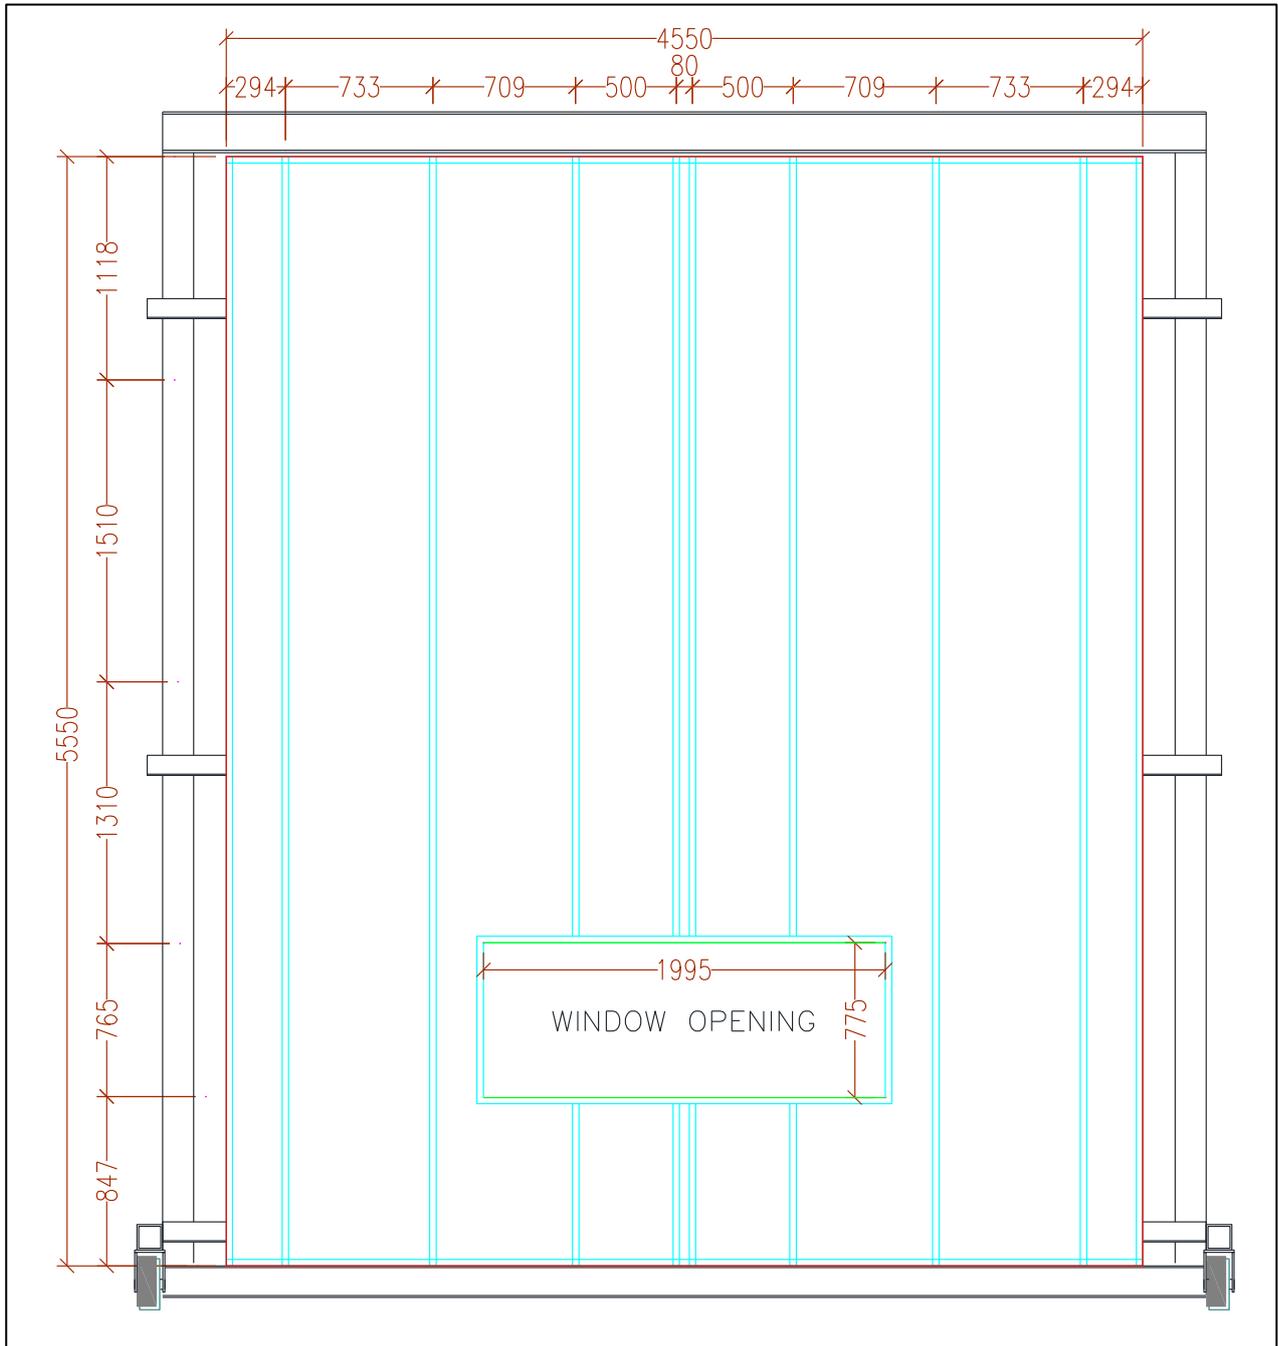

E. Window Detail:

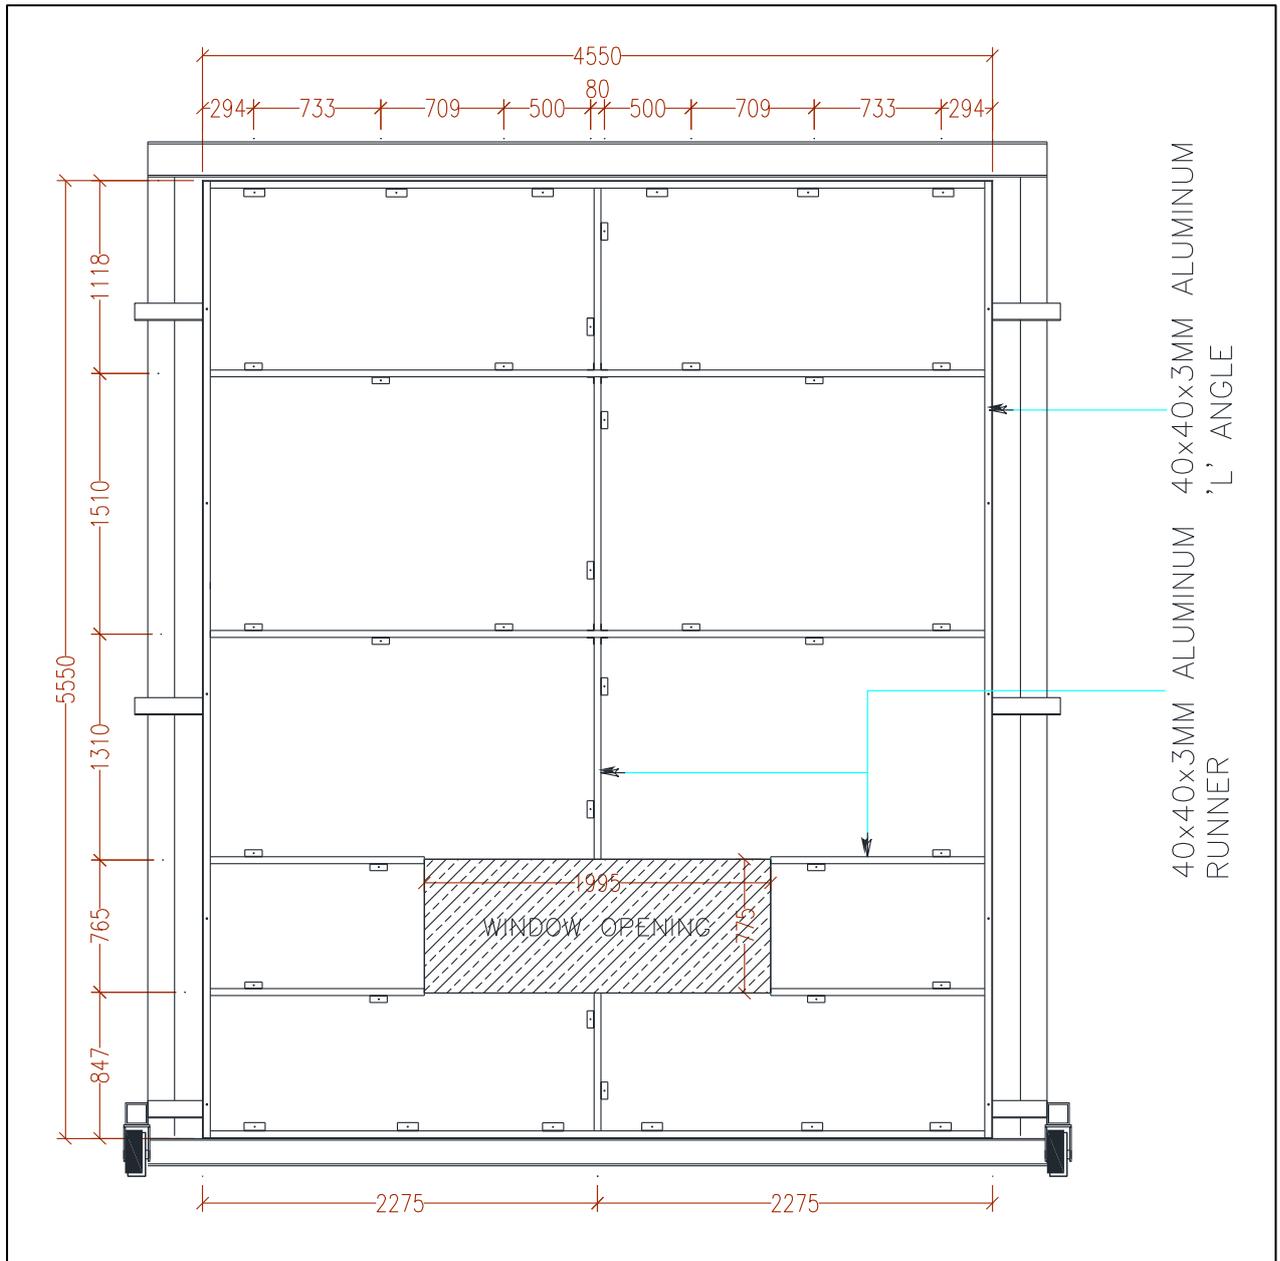

Aluminium L-angles – Inner perimeter edge	
Material	Extruded Aluminium T6-6063
Fabricator	United Colour Film L.L.C.
Thickness	2mm I Cut to required length.
Fixing Method & Application	The Aluminium L-angles were fixed along the interior edges of the perimeter of the window using #10x1 inch self drilling screws spaced at 600mm c/c and 50mm from the edges.
Evidence of survey	Information provided by Sponsor and verified by TBWIC.

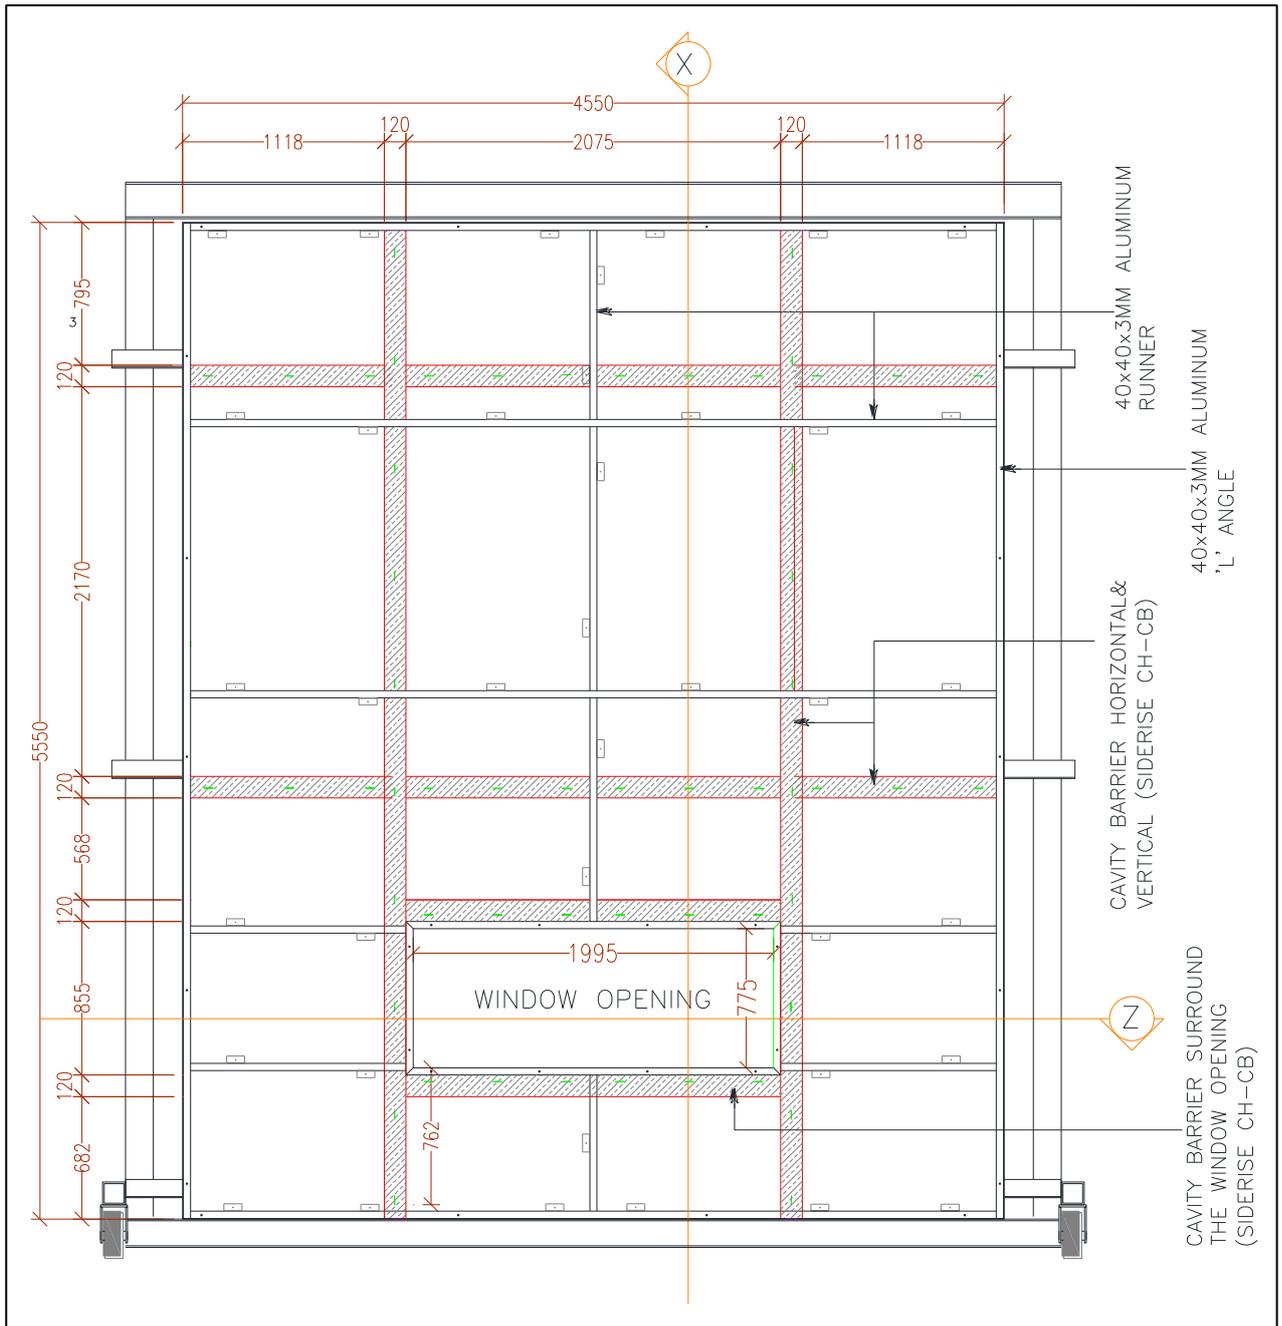

18. APPENDIX 4 – ASSEMBLY DRAWINGS

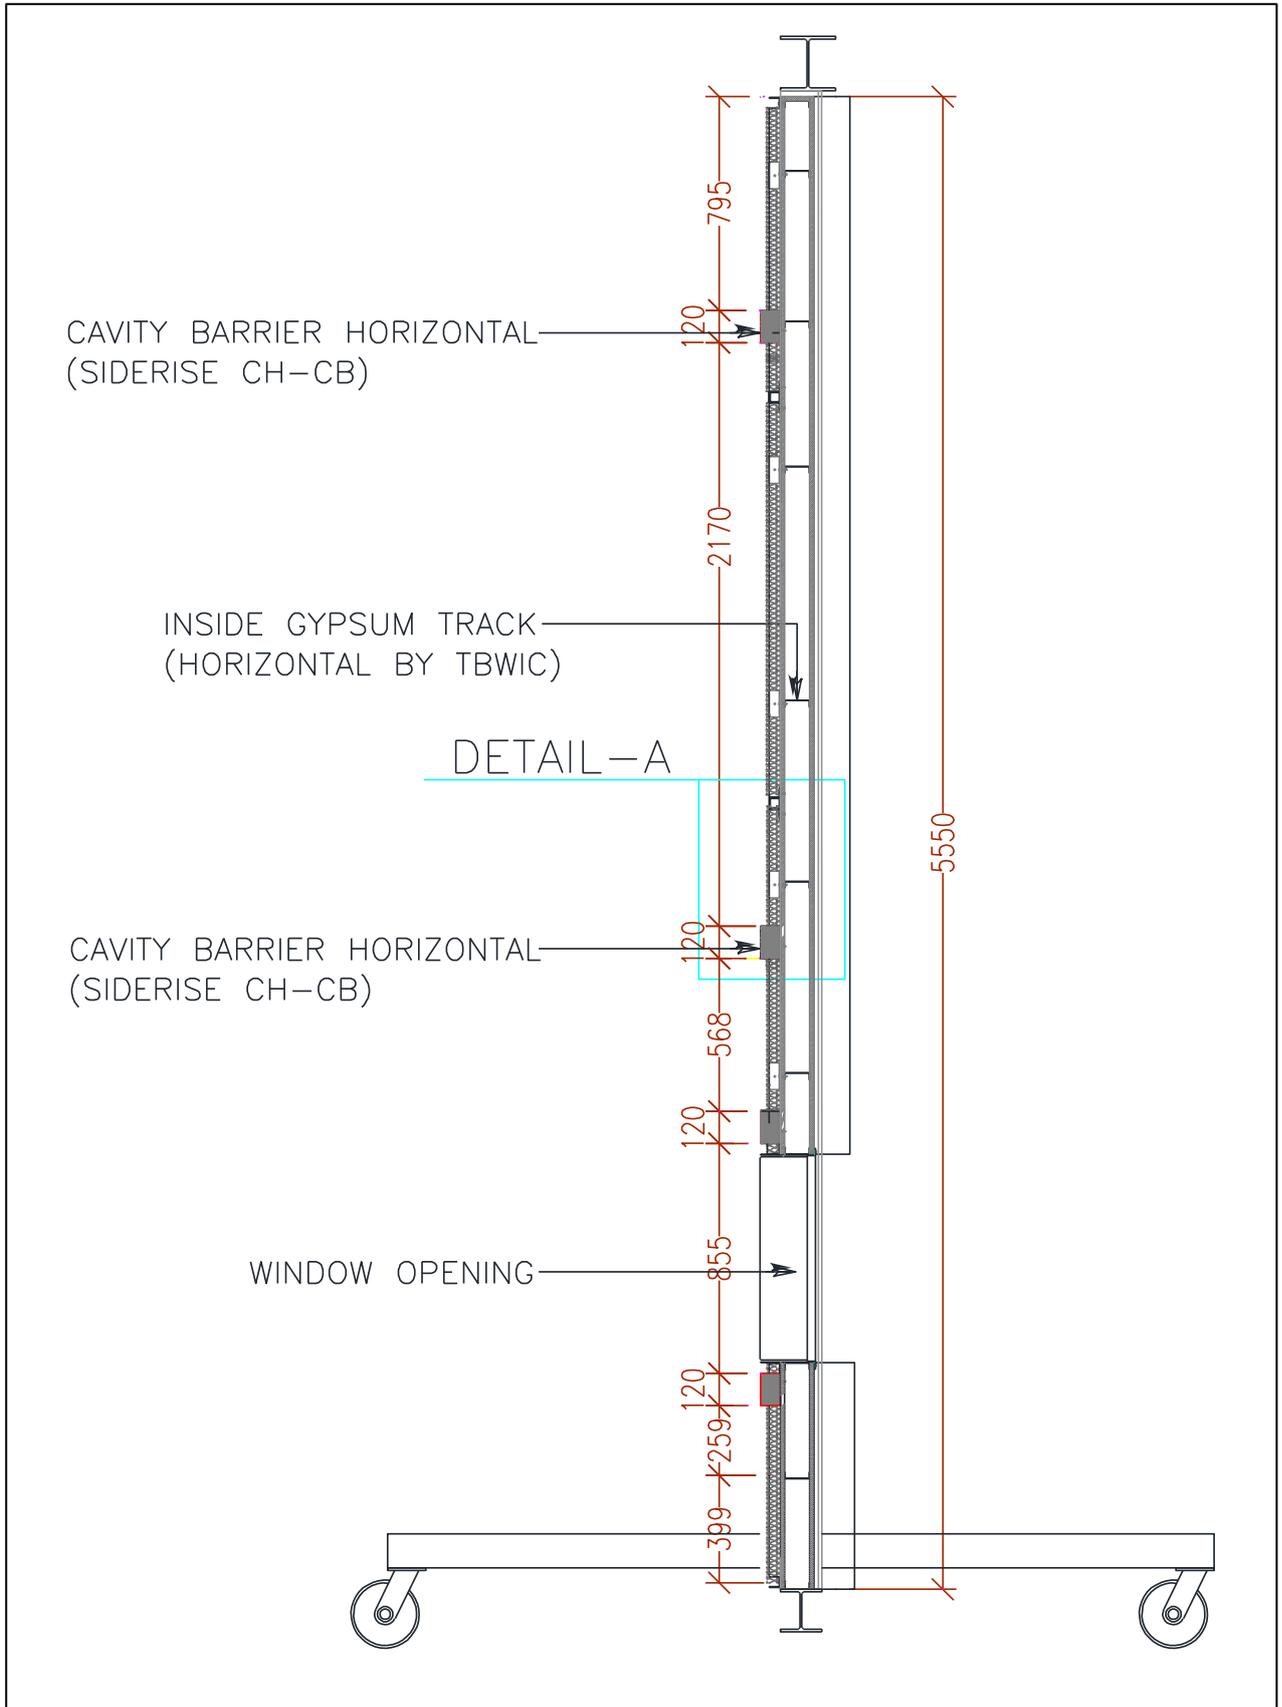

Drawing 1: Base wall framing system of the specimen.

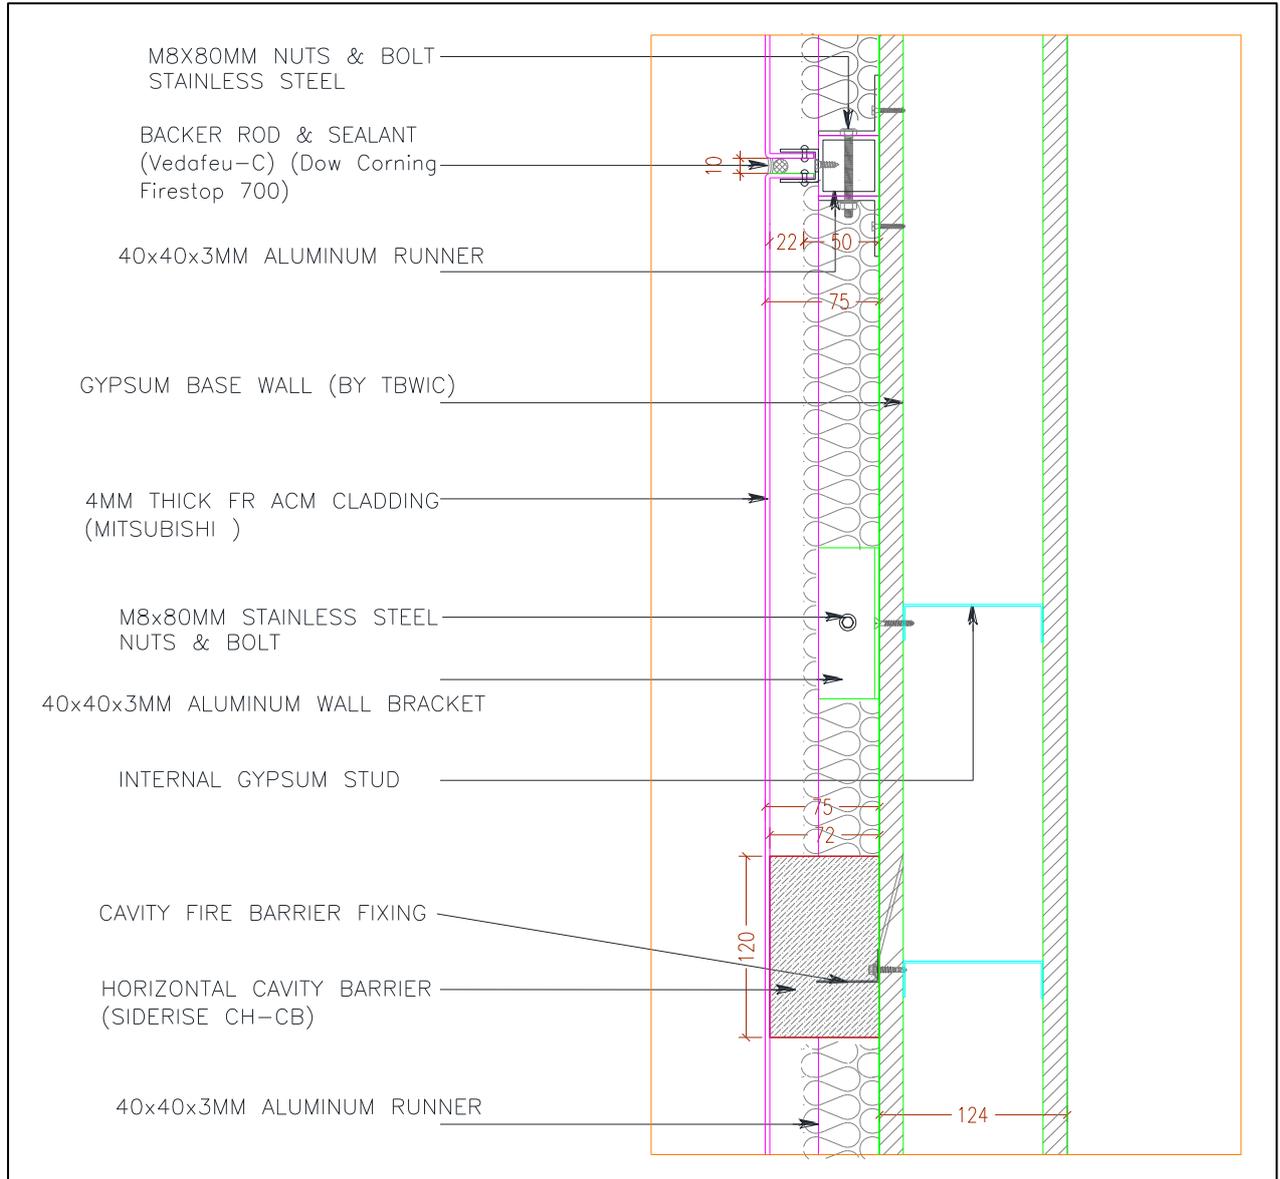

Drawing 2: Framing system for the cladding structure.
(Drawing provided by the sponsor and verified by TBWIC)

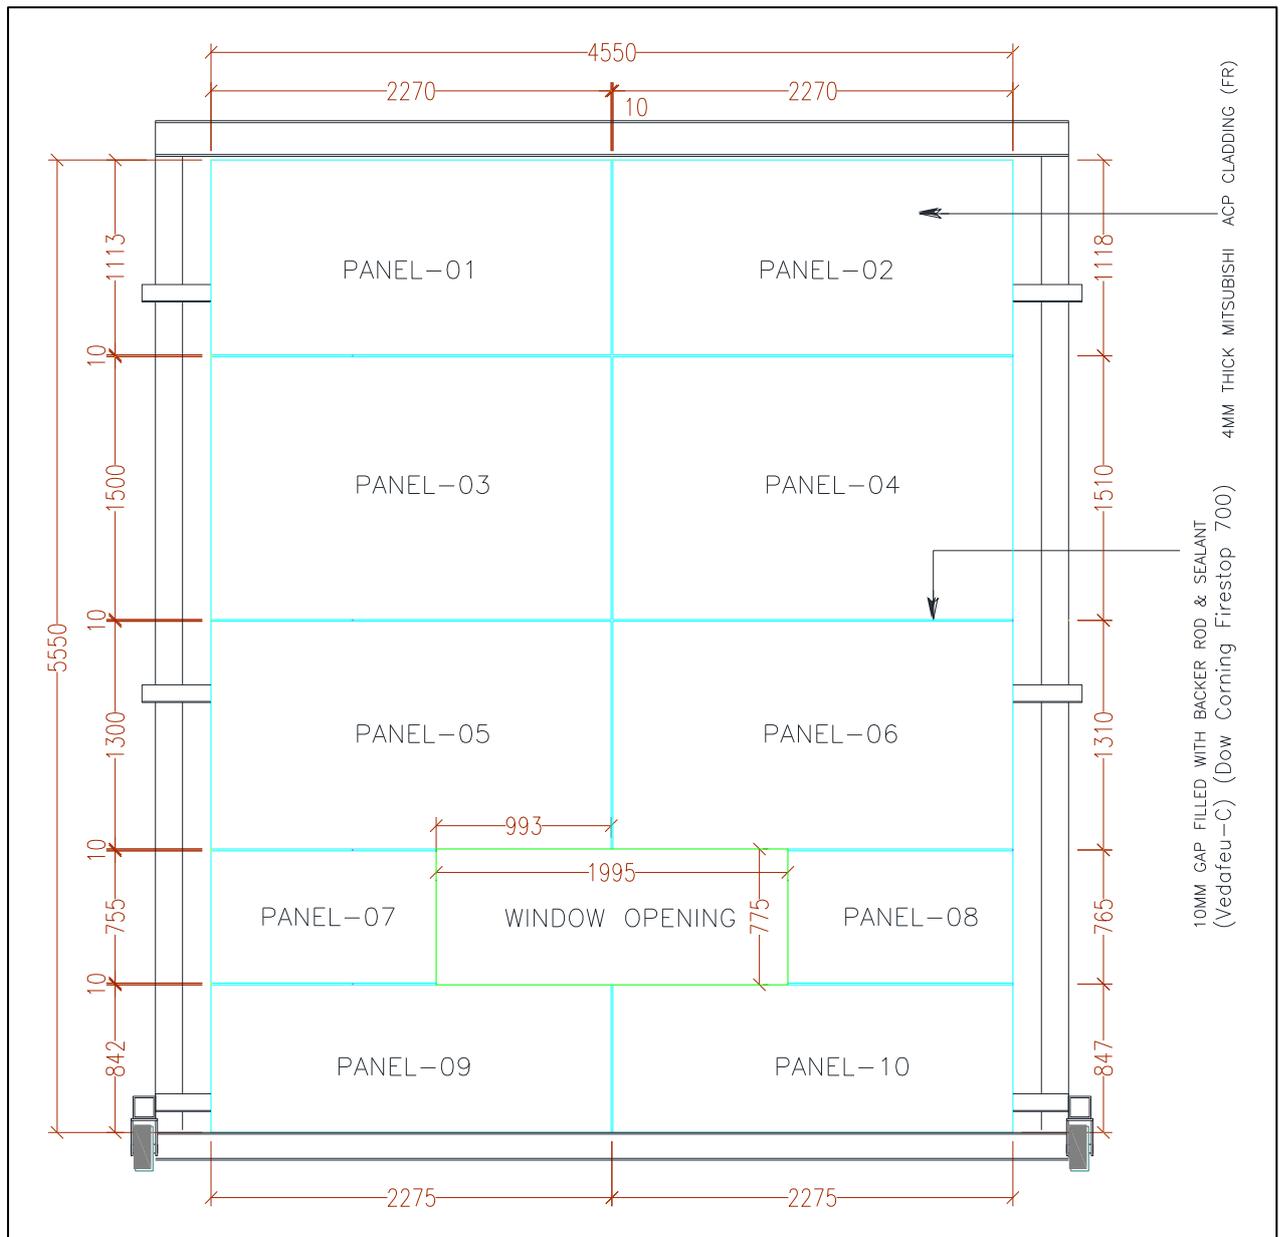

Drawing 3: Elevation showing the arrangement of the horizontal and vertical cavity barrier.
(Drawing provided by the sponsor and verified by TBWIC)

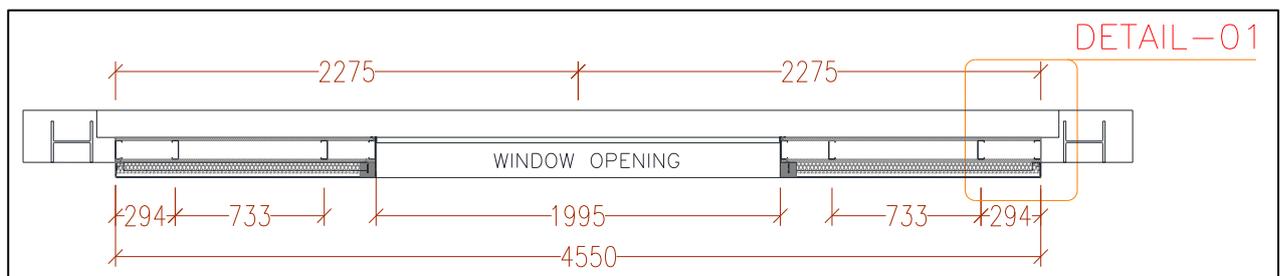

Drawing 4: Vertical section X of the Drawing 3.
(Drawing provided by the sponsor and verified by TBWIC)

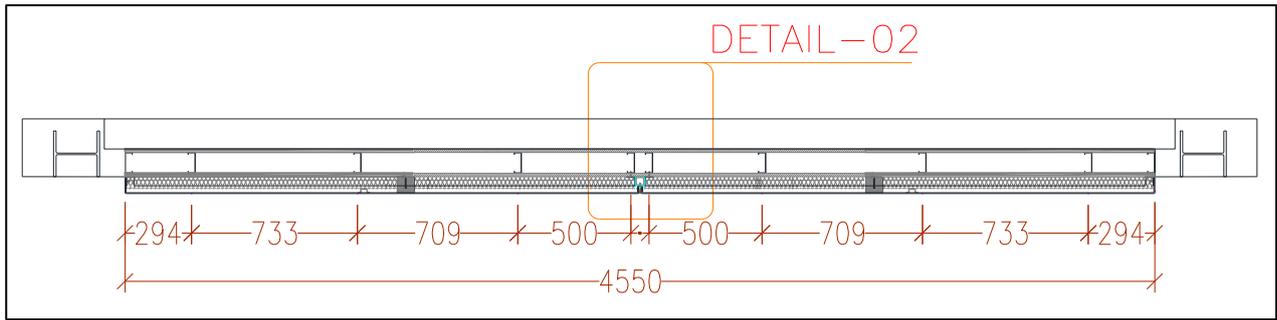

Drawing 5: Detail A of the specimen.
(Drawing provided by the sponsor and verified by TBWIC)

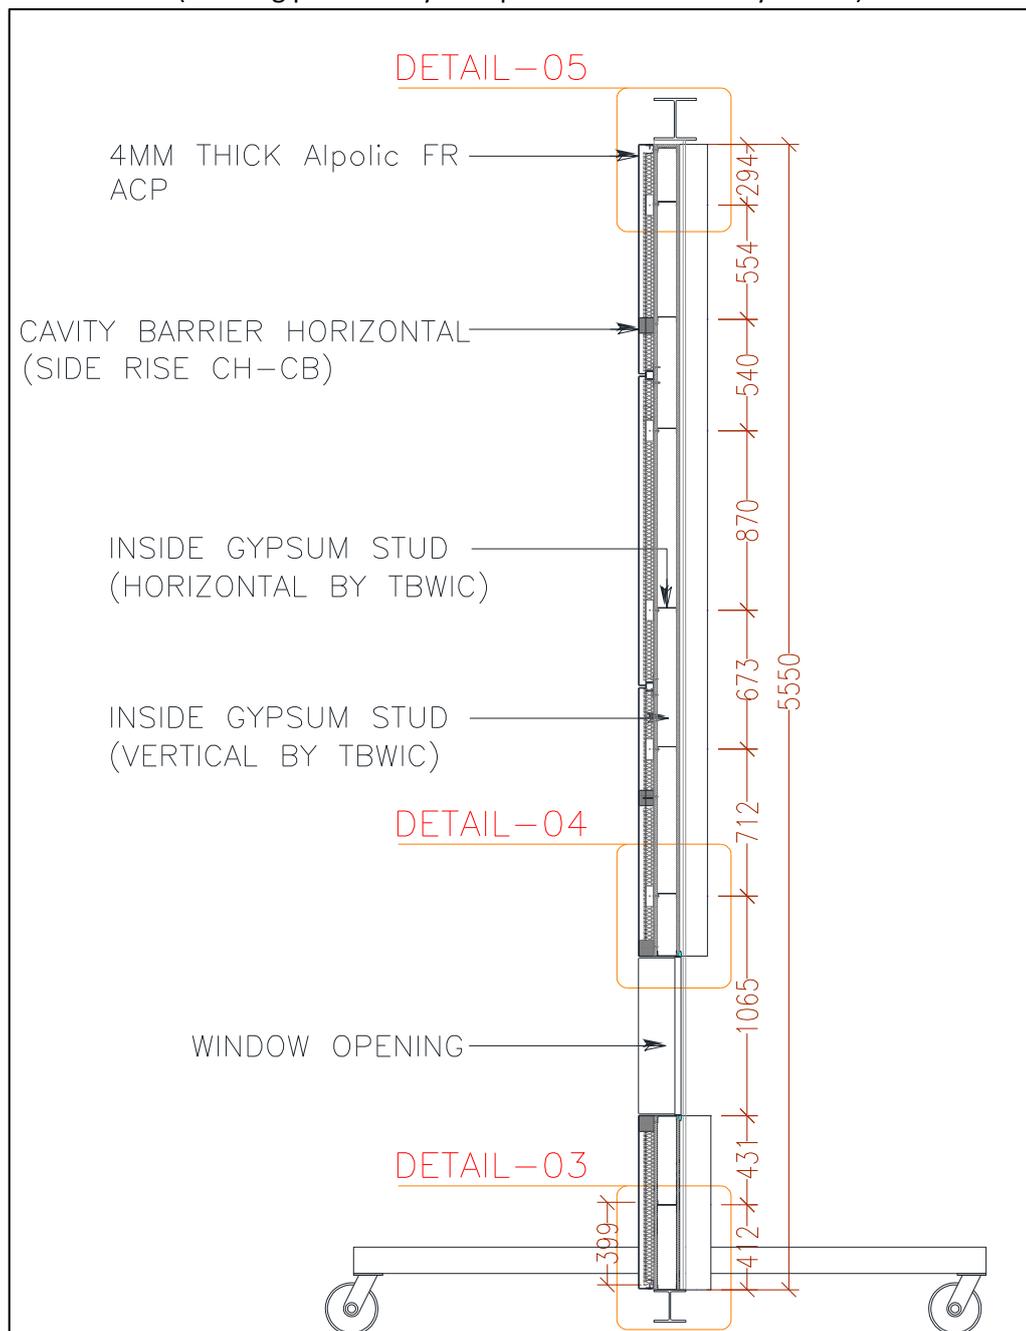

Drawing 6: Elevation showing the ACP arrangement.
(Drawing provided by the sponsor and verified by TBWIC)

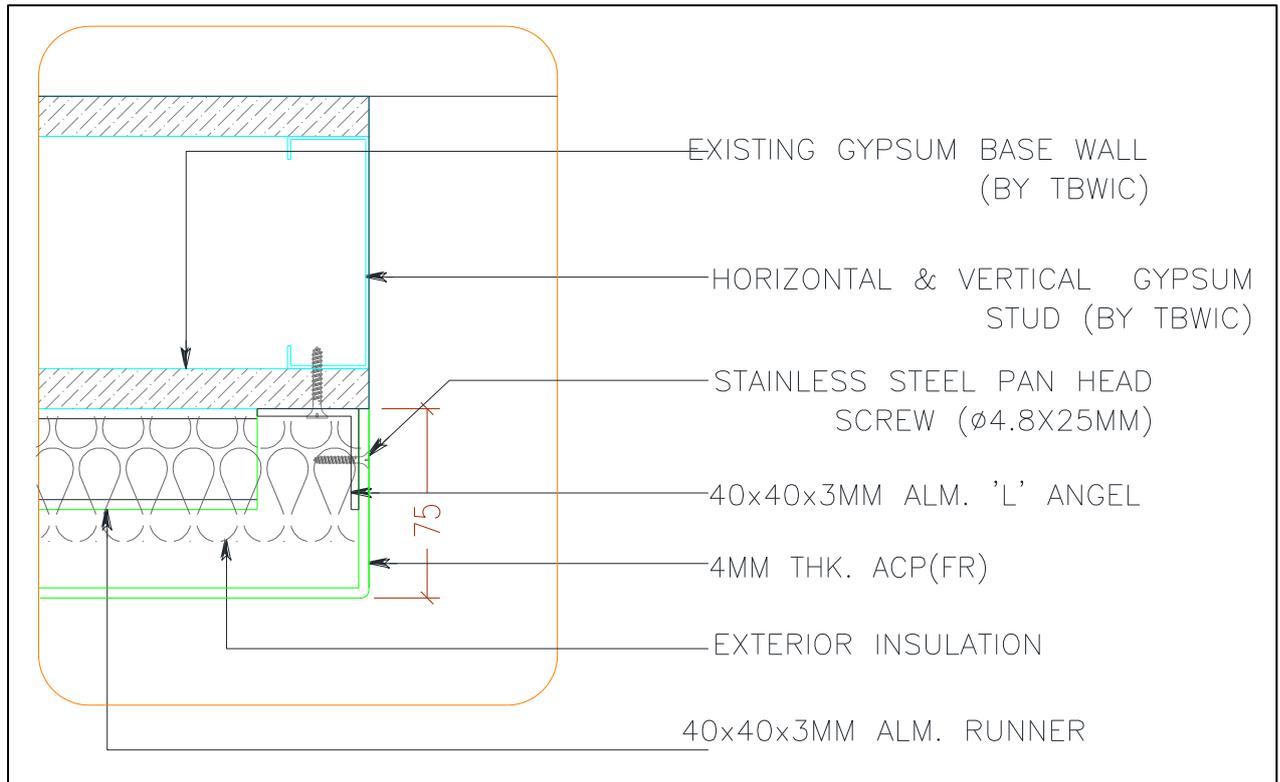

Drawing 7: Horizontal section of the specimen along the window opening.
(Drawing provided by the sponsor and verified by TBWIC)

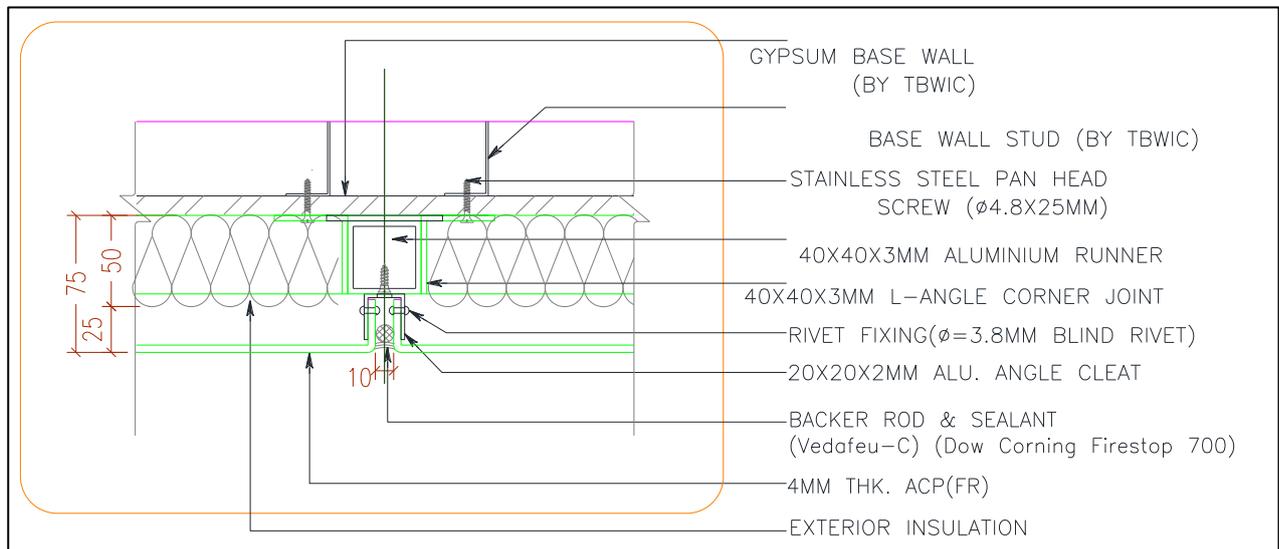

Drawing 8: Horizontal section of the specimen along the mid-height of the specimen.
(Drawing provided by the sponsor and verified by TBWIC)

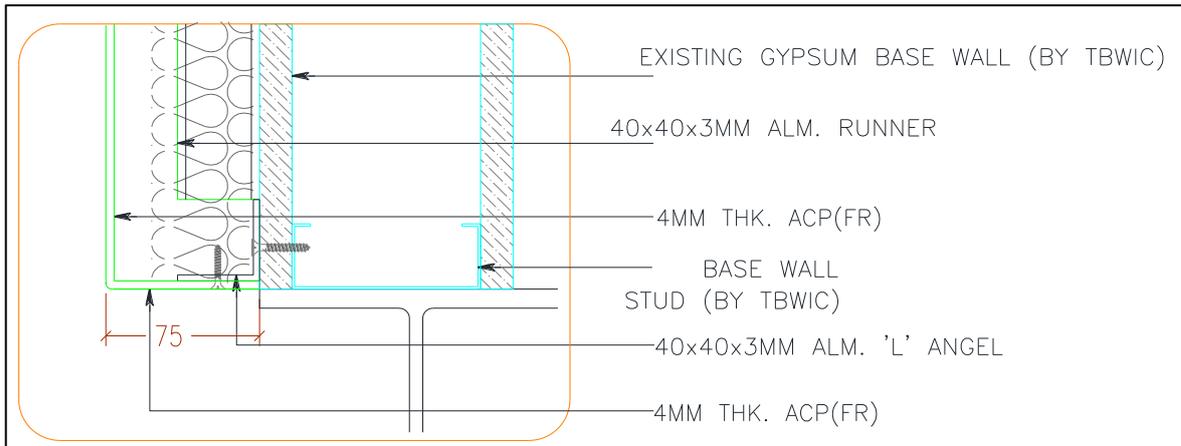

Drawing 9: Vertical section of the specimen along the mid-width of the specimen.
(Drawing provided by the sponsor and verified by TBWIC)

Drawing 10: Detail 1 of the specimen.
(Drawing provided by the sponsor and verified by TBWIC)

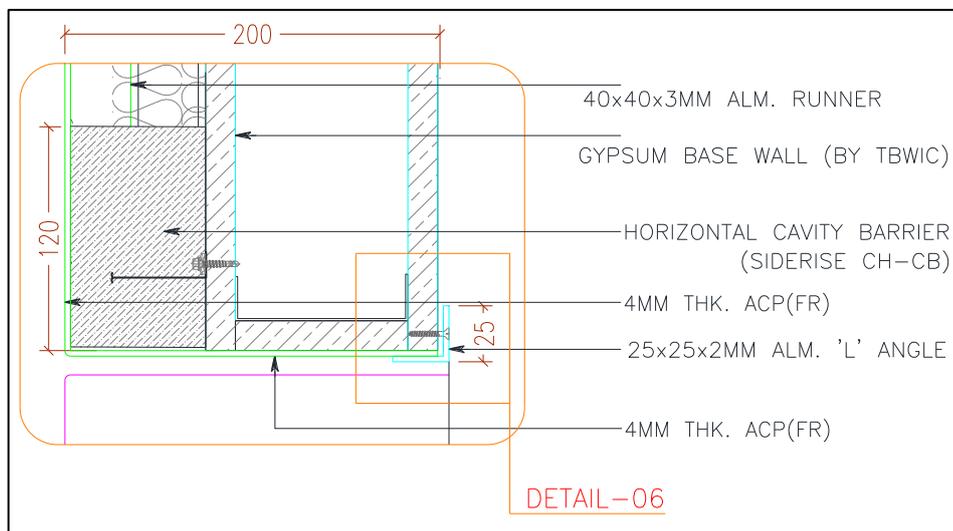

Drawing 11: Detail 2 of the specimen.
(Drawing provided by the sponsor and verified by TBWIC)

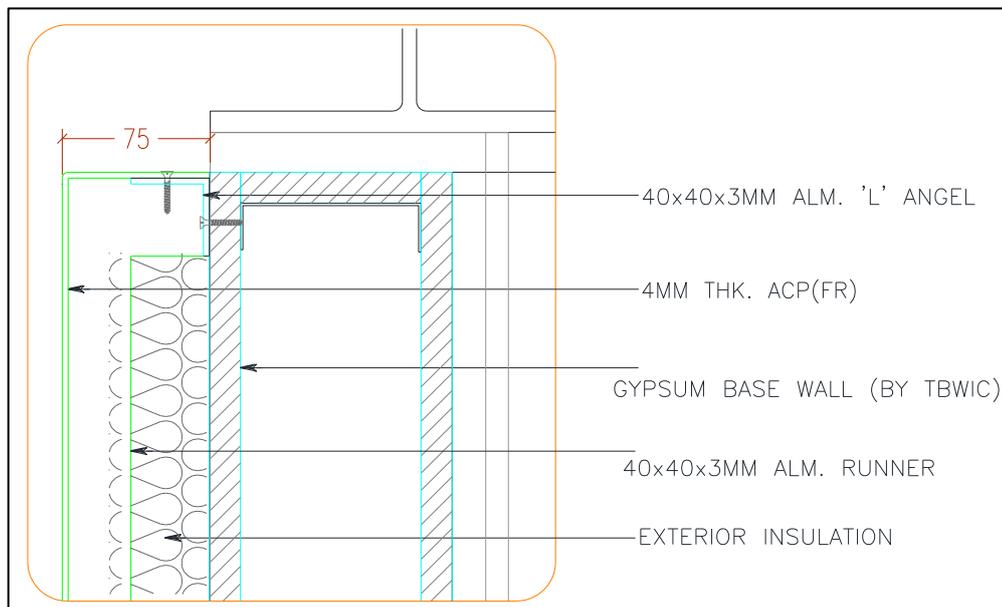

Drawing 12: Detail 3 of the specimen.

(Drawing provided by the sponsor and verified by TBWIC)

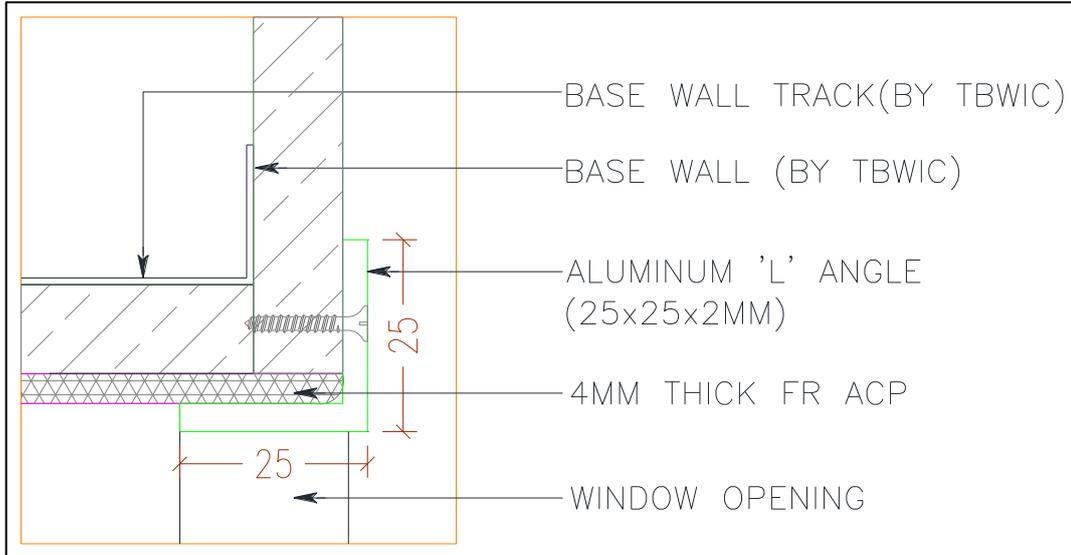

Drawing 13: Detail 4 of the specimen.

(Drawing provided by the sponsor and verified by TBWIC)

Drawing 14: Detail 5 of the specimen.

(Drawing provided by the sponsor and verified by TBWIC)

Drawing 15: Detail 6 of the specimen.
(Drawing provided by the sponsor and verified by TBWIC)

20. APPENDIX 6 – GRAPHS

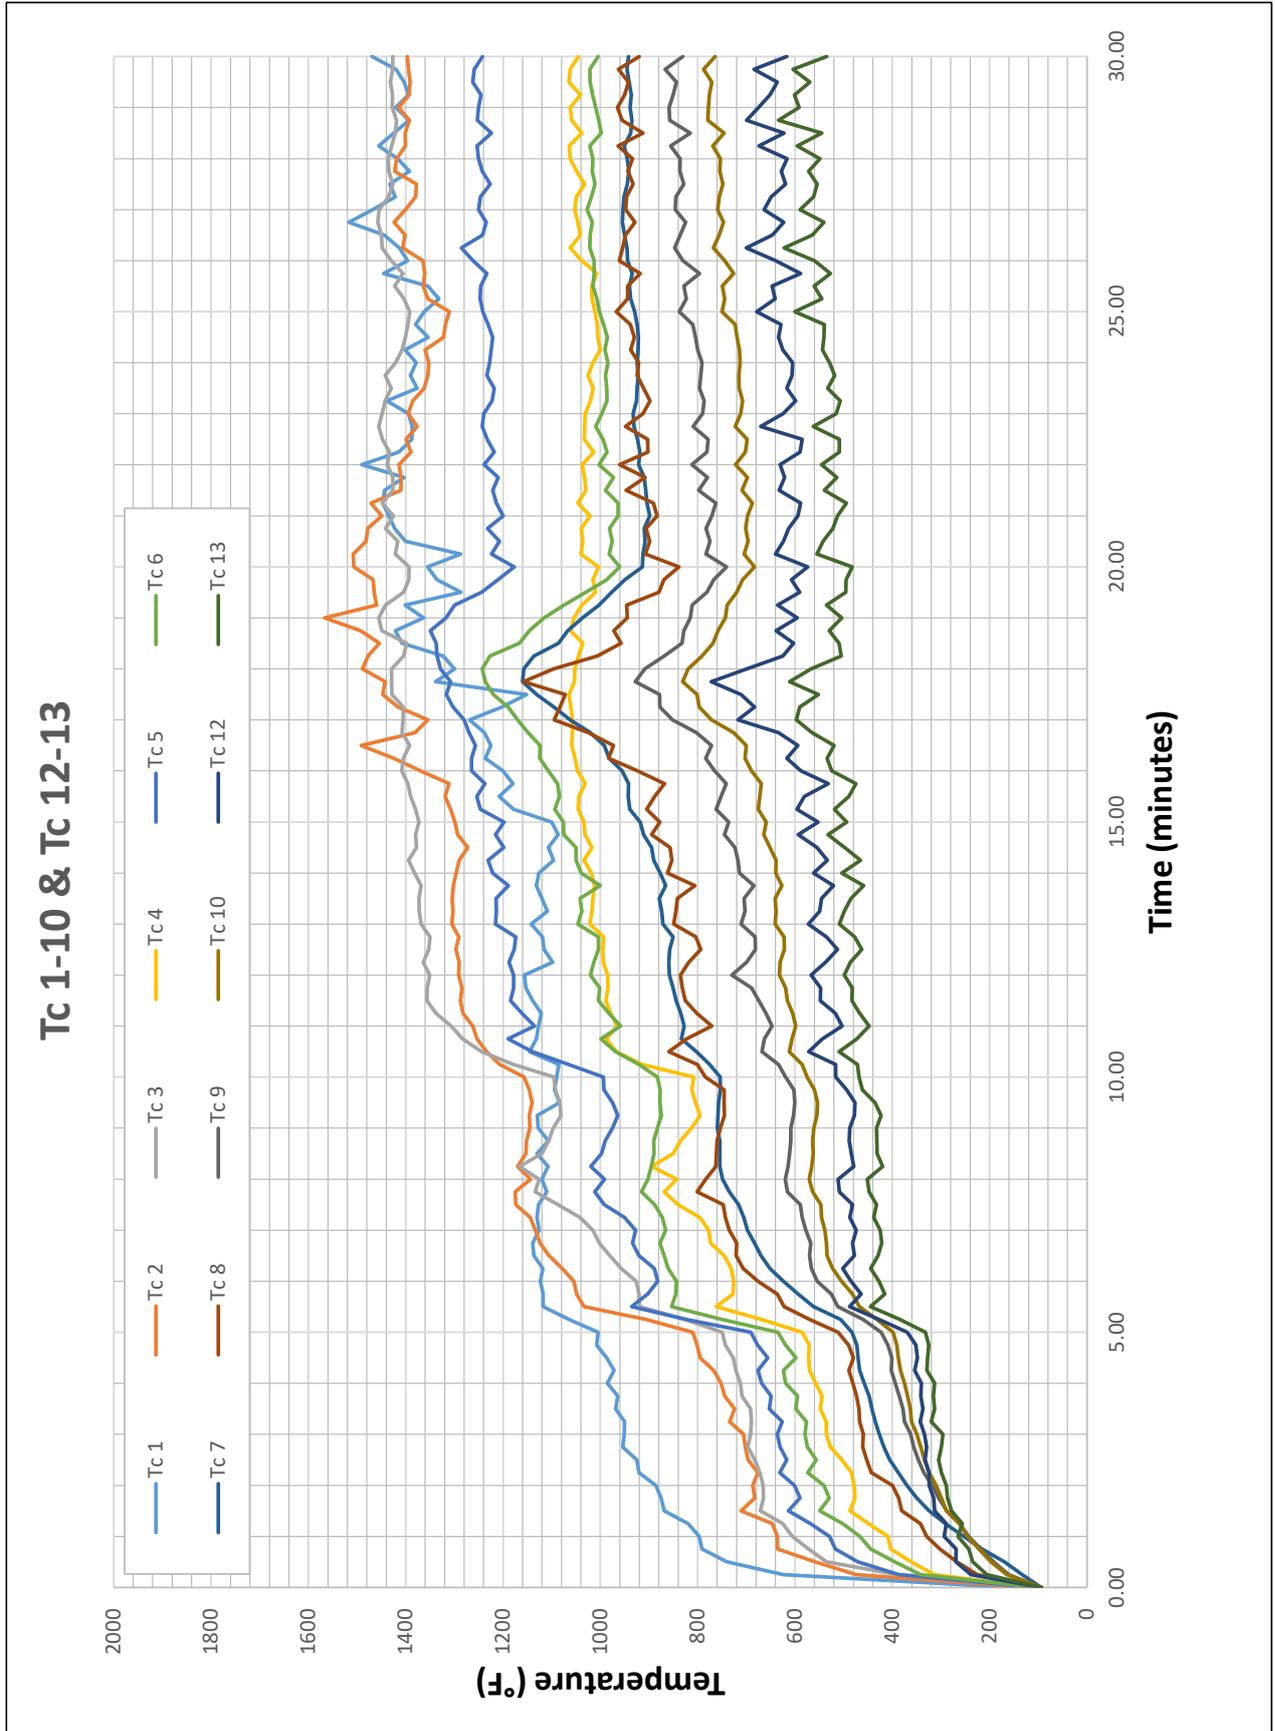

Graph 1: Burn room thermocouple temperature (Tc41 – Tc45)

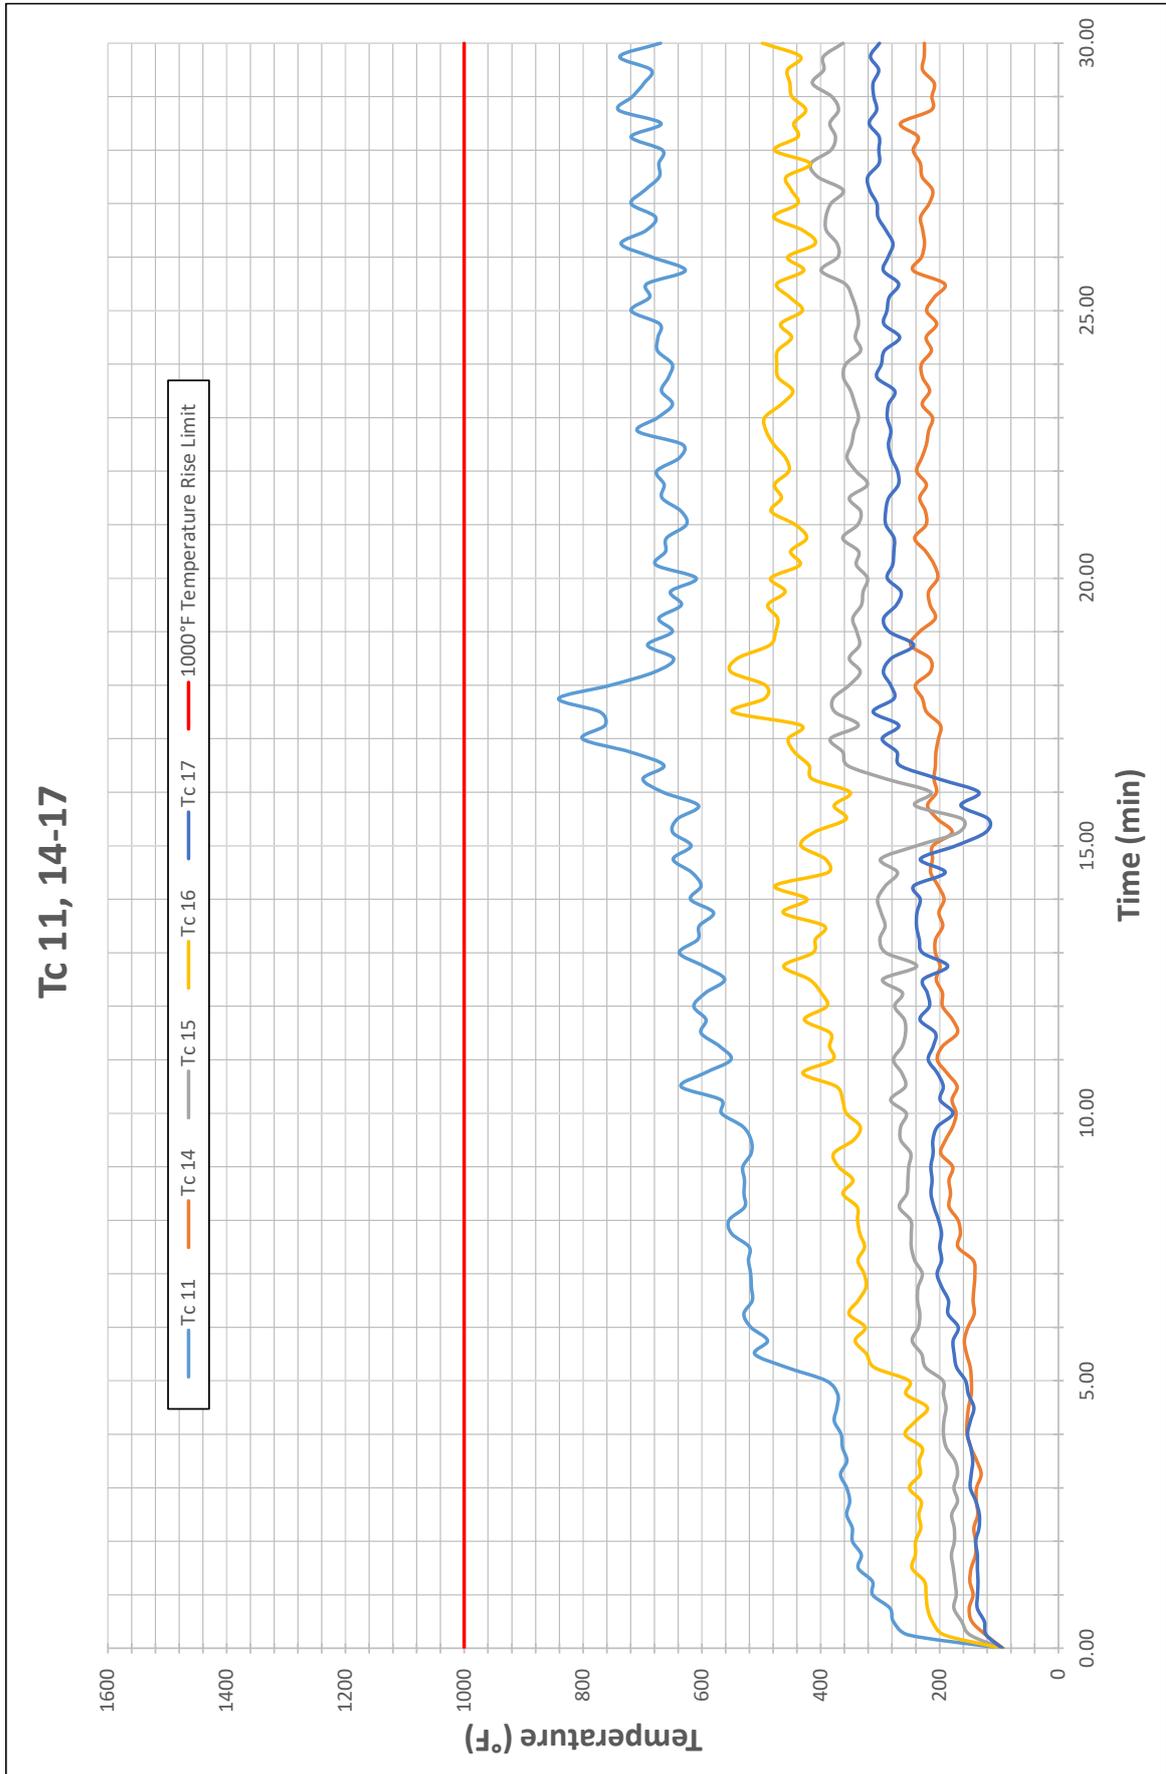

Graph 2: Second storey room thermocouple temperatures (Tc49-Tc54)

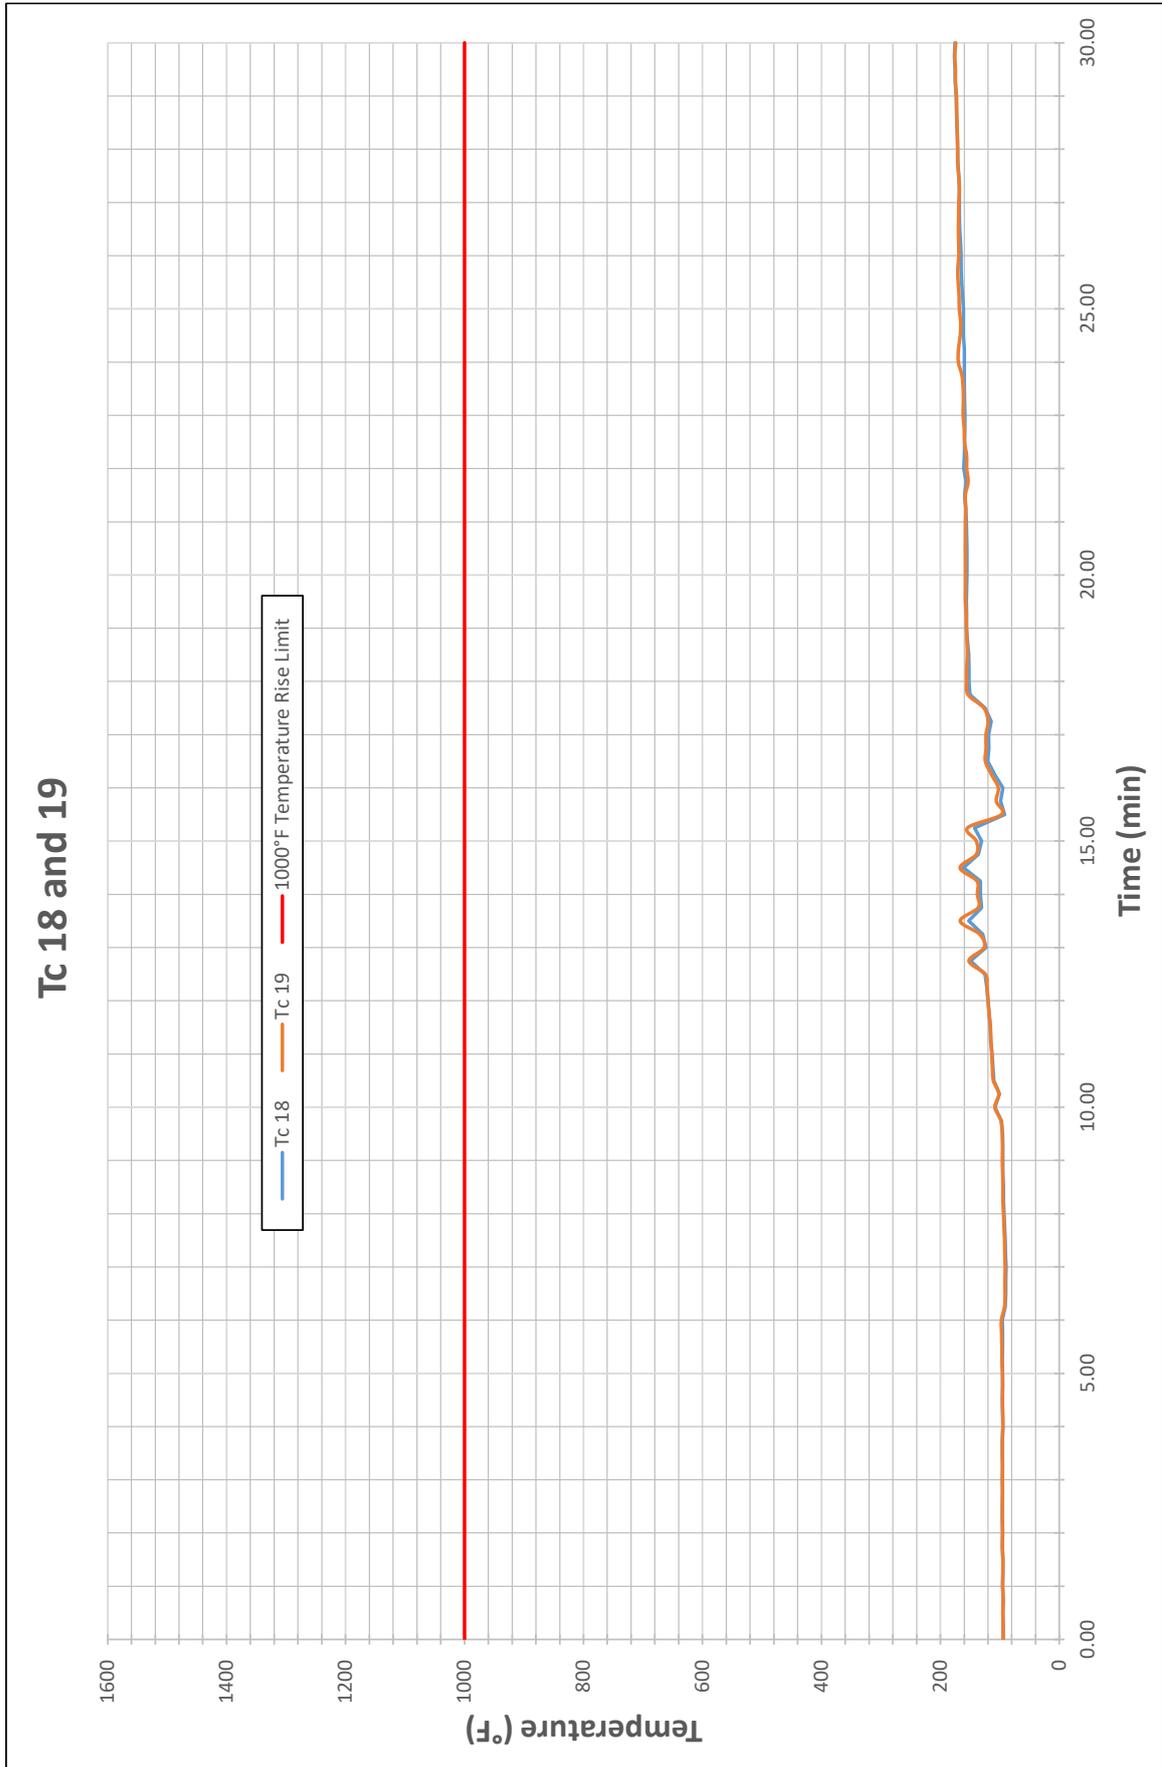

Graph 3: Burn room interior wall temperature (Tc46 – Tc48)

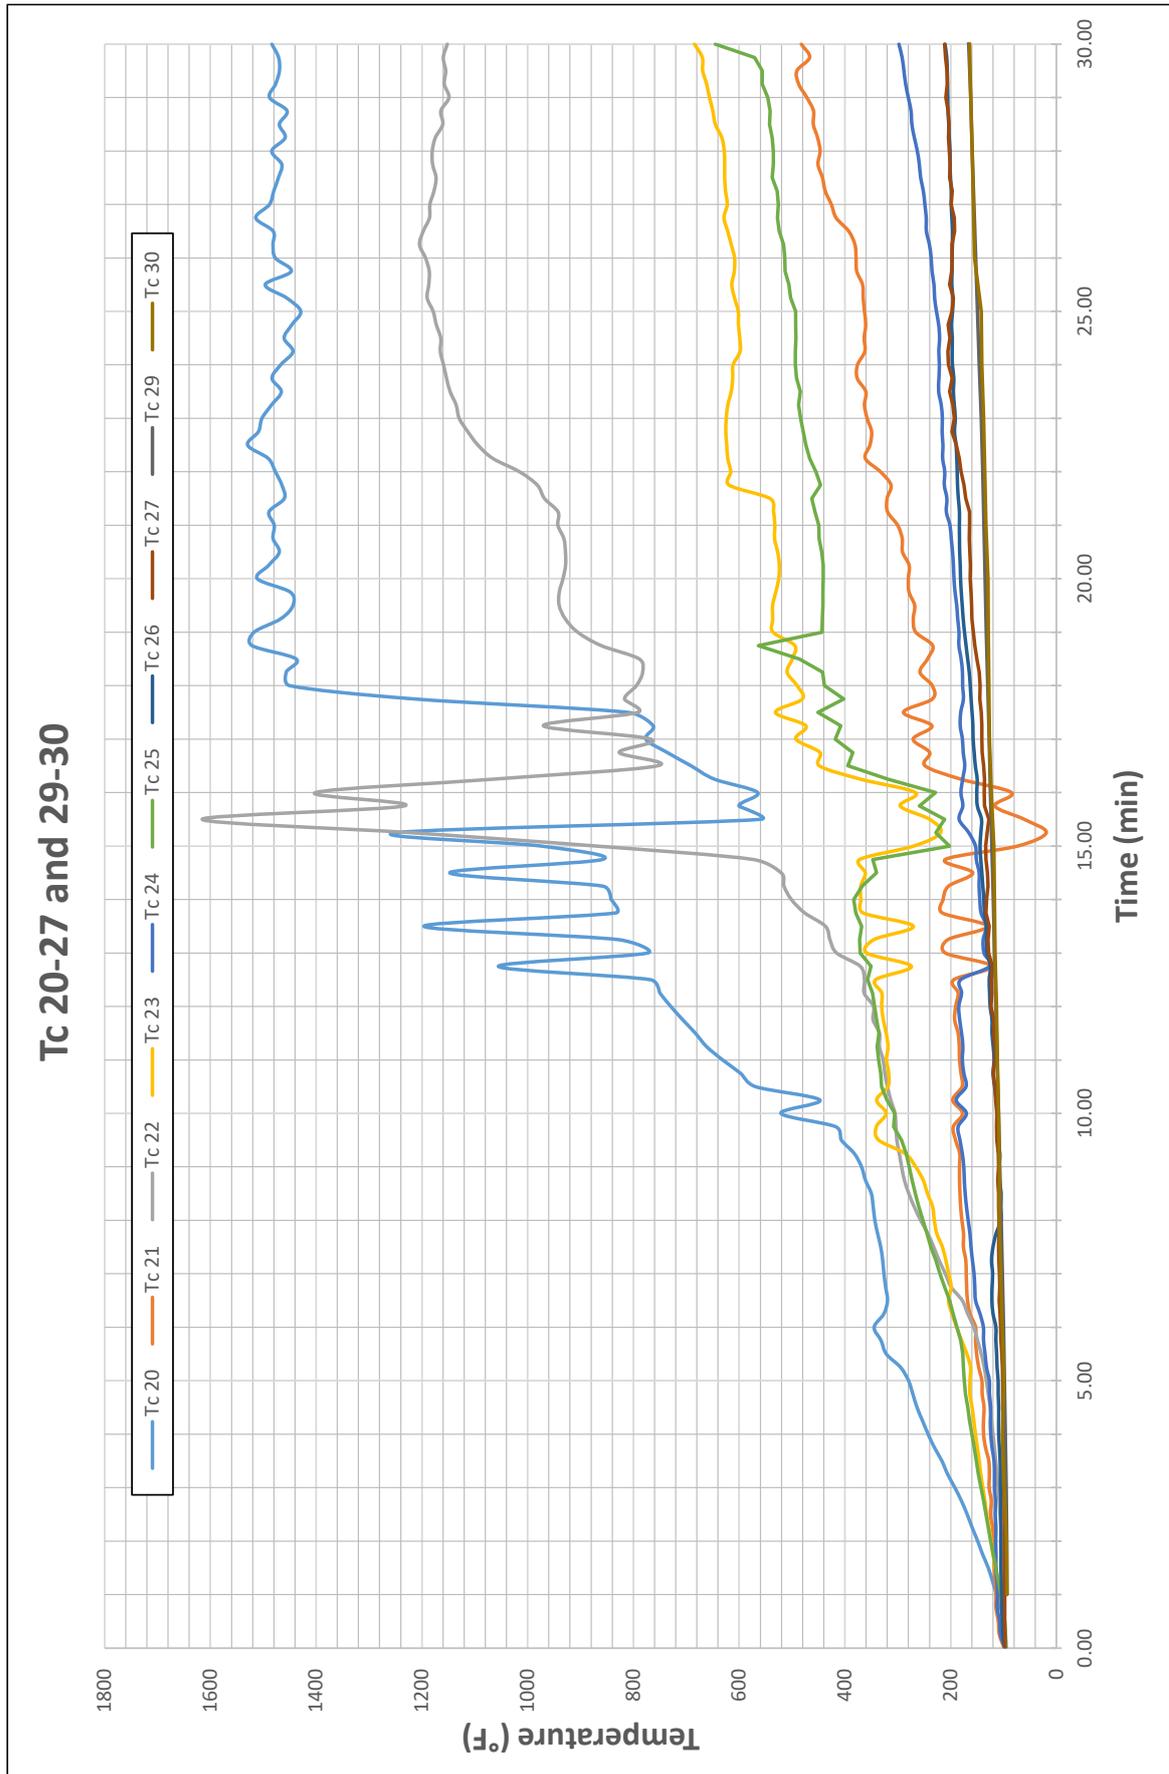

Graph 4: Thermocouple temperatures for Tc1 -Tc10 and Tc12 – Tc23.

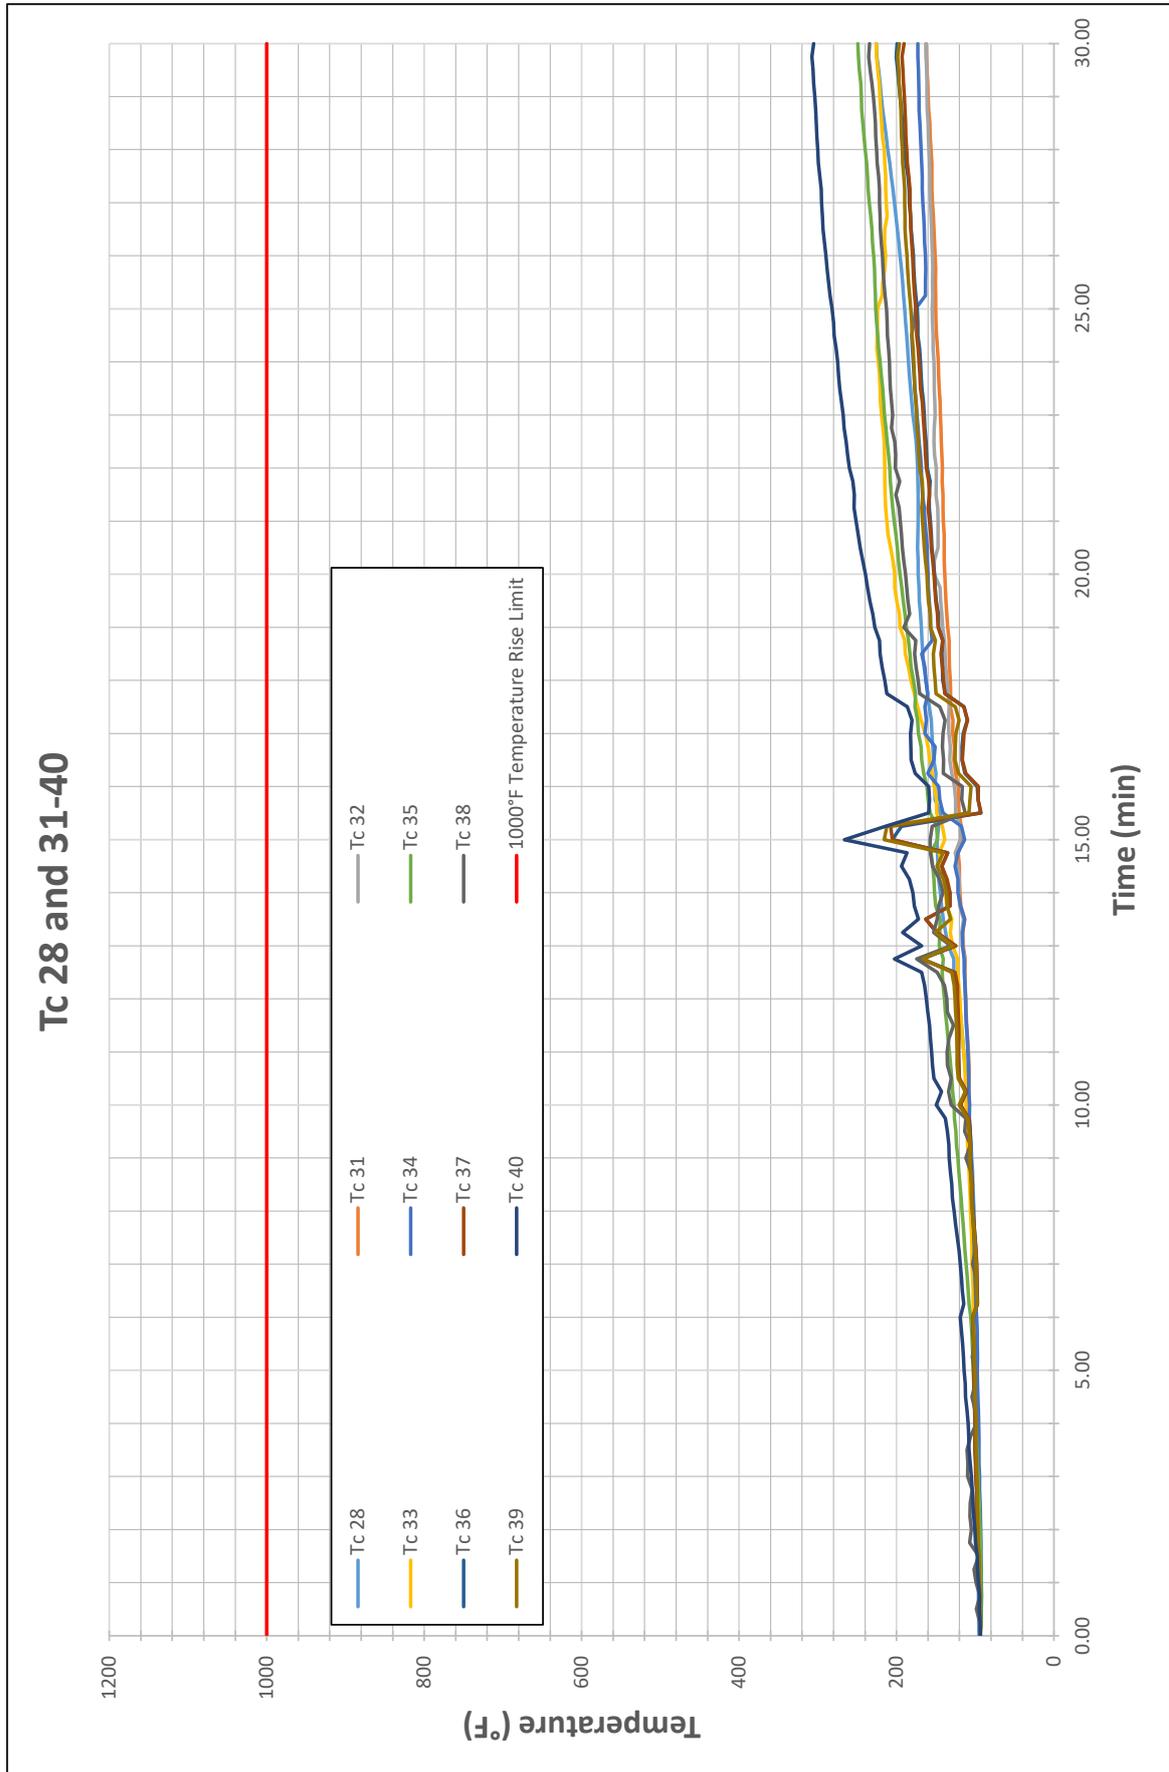

Graph 5: Thermocouple temperatures for Tc11 and Tc14 – Tc17.

Graph 6: Thermocouple temperatures for Tc18 and Tc19.

Graph 7: Thermocouple temperatures for Tc20 – Tc27 and Tc29 – Tc30.

Graph 8: Thermocouple temperatures for Tc28 and Tc31 – Tc40.

21. APPENDIX 7 – CONSTRUCTION PHOTOGRAPHS

Picture 1: Wall bracket and horizontal runner fixing assembly.

Picture 2: Aluminium L-angle along the vertical edge of the specimen.

Picture 3: Cavity fire barrier along the window aperture.

Picture 4: External insulation and cavity fire barrier fixed over the base wall.

Picture 5: External insulation slab fixing anchor.

Picture 6: Aluminium strip at 45° corner joint of ACP's.

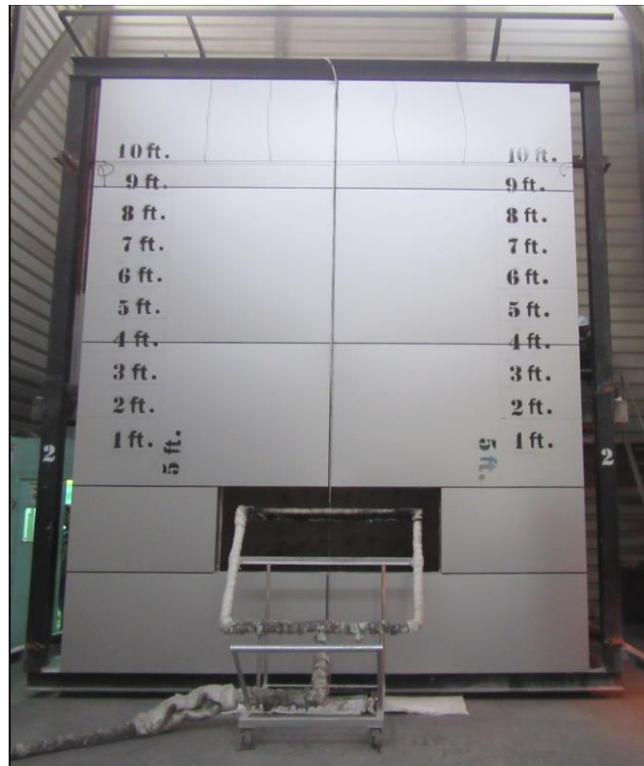

Picture 7: 90° corner joints of ACP's.

Picture 8: Alpollic FR ACP's fixed onto the framing system.

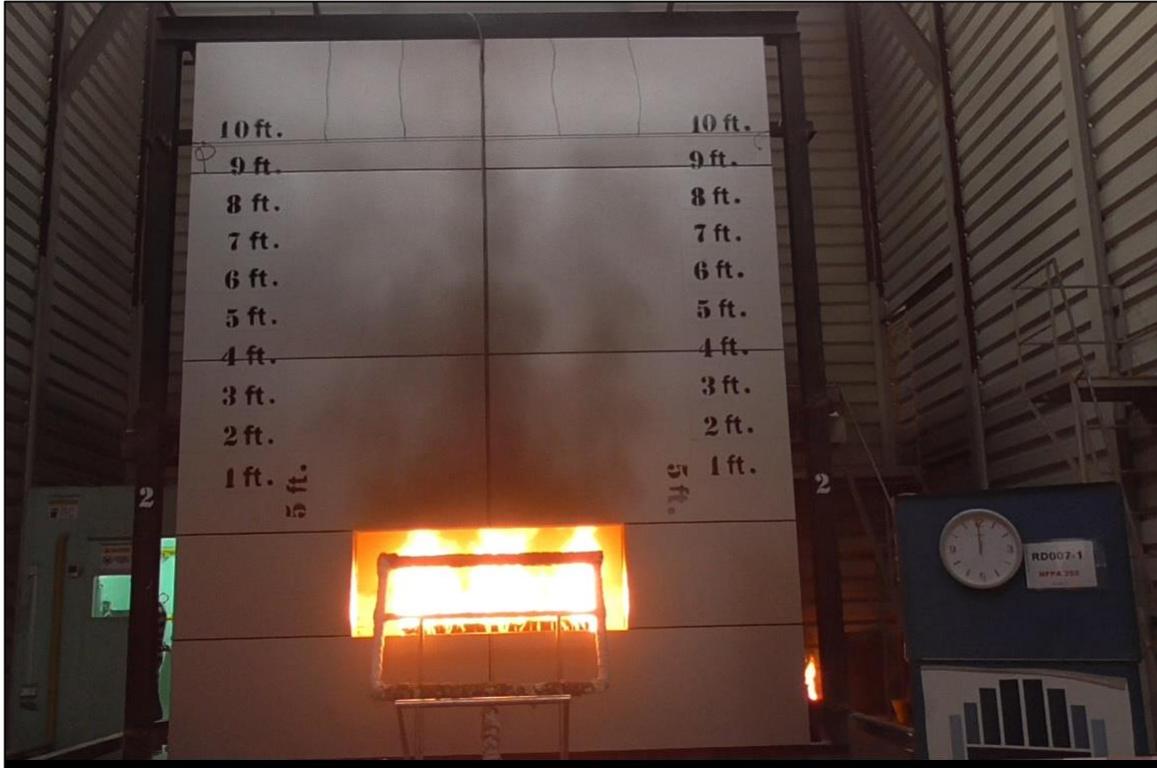

Picture 9: Firestop rope backer rod fitted into the gap between the panels.

Picture 10: Elevation of the completed specimen.

22. APPENDIX 8 – TEST PHOTOGRAPHS

Picture 11: The specimen at the beginning of the test.

Picture 12: The interior of the base wall in the second floor test room at the beginning of the test.

Picture 13: The specimen at 5:00 minutes and when the window burner was ignited.

Picture 14: The specimen immediately after the gas was shut off, starting the observation period.
