

INSTALLATION INSTRUCTIONS & OWNERS GUIDE

RHEEM LOW PRESSURE VITREOUS ENAMEL ELECTRIC HOT WATER HEATERS

Congratulations for choosing a Rheem Water Heater

It is important that you take a few minutes to read this booklet as it may save you time and trouble later.

If you require any further information or your water heater needs to be serviced, please contact the Rheem Service Department on 0800 657 335, or the nearest service centre (look in the Yellow Pages under Plumbers) or visit www.rheem.co.nz

Important to the Installer

Do not leave this booklet inside the element cover after installation.

Please leave the booklet with the water heater's owner.

IMPORTANT INFORMATION

GENERAL

- The information contained in this manual, and all other information or advice given at any time by Rheem New Zealand Limited in connection with the purchase, installation or use of a Rheem water heater, is given in good faith. Subject to any rights the owner may have under the “Consumer Guarantees Act 1993”, Rheem New Zealand Limited will not be liable to any person for any inaccuracy or omission in the information or advice arising through the fault or negligence of Rheem New Zealand Limited or any other person or through any other cause whatsoever.
- This water heater is to be installed to AS/NZS3500.4 or NZS4603 (if the water heater is to be installed as an open vented system) or NZS4607 (if the water heater is to be installed as a valve vented system) and the requirements of the appropriate local authority and G12 of the building code.

 **Warning:** *This water heater is only intended to be operated by persons who have the experience or knowledge and capabilities to do so. This water heater is not intended to be operated by persons with reduced physical, sensory or mental capabilities i.e. the infirm, or by children. Children should be supervised to ensure they do not play with the appliance.*

ABOUT YOUR WATER HEATER

Q. DOES THE WATER QUALITY AFFECT THE WATER HEATER?

A. Your water heater is suitable for most public water supplies, however, some water qualities may have a detrimental effect on it. **If you are in a known harsh water area please refer to page 9.**

Q. HOW HOT SHOULD THE WATER BE?

A. For reasons of safety and economy, we recommend the thermostat is adjusted to the lowest setting that meets your needs. Some models require an authorised person to make any temperature adjustments. The New Zealand Building Code G12 requires a temperature setting of not less than 60°C within the tank to protect against Legionella.

Regulations require an approved temperature limiting device (tempering valve) be fitted into the hot water pipe work to the bathroom(s) and ensuite(s) to provide safety protection from potential scalding. This will keep the hot water supply temperature to the bathroom(s) and ensuite(s) below 55°C which will reduce the risk of scald injury whilst still allowing hotter water (60°C+) to the kitchen and laundry.

To minimise scalding, especially for those people in high scald risk categories i.e. young children, people with potentially incapacitating medical conditions, elderly people etc, this water heater must be installed in accordance with AS/NZS 3500.4.

 **Warning:** *This water heater can deliver water at temperatures which can cause scalding. Always check the water temperature before use, such as when entering a shower or filling a bath or basin, to ensure it is suitable for the application and will not cause a scald injury.*

Q. HOW DO I KNOW IF THE WATER HEATER IS INSTALLED CORRECTLY?

A. Refer to the installation requirements on page 4.

Q. HOW LONG WILL THE WATER HEATER LAST?

A. There are a number of factors that affect the life of the water heater. These include; the water quality, water pressure, water temperature and the usage pattern, however, your Rheem water heater is supported by a comprehensive warranty (refer to page 11).

The life of the water heater may be extended by arranging for an authorised person to inspect the anode and replace it, if required.

The suggested time period after installation when the anode should be inspected is 8 years in town supply water areas.

In areas of softened water supplies or poor water quality bores, wells or dam supplied the anode should be inspected after 5 years. Failure to do so will shorten the water heaters life. (Refer to "Water Quality" on page 8).

HOW THE WATER HEATER WORKS

SINGLE ELEMENT MODELS

Water stored within the water heater is heated by the electric heating element. The thermostat controls the electricity supply to the heating element so that a constant water temperature is maintained. As the cold water is heated it expands approximately 1/50 of its volume and, as a result, a small amount of water is discharged from the cold water expansion valve or through the vent pipe onto the roof for open vented installations.

SAFETY

Fitted to the water heater is a thermostat, which incorporates an over-temperature thermal cut-out device.

 **Warning:** All installations must be fitted with a pressure relief valve.

 **Warning:** The operation of the thermal cut-out indicates a possible dangerous situation. Do not reset the thermal cut-out until the water heater has been serviced by an authorised service person.

 **Warning:** These safety devices must not be tampered with, or removed, and under no circumstances operate the water heater unless these devices are fitted.

REGULAR CARE

GOING ON HOLIDAYS:

If you plan to be away from home for one or two nights, we suggest that you leave the water heater switched on. However, if you plan to stay away more than a few nights, conserve energy by switching the water heater off at the isolating switch, or at the main switchboard. In locations where freezing could occur, you should leave the water heater turned on.

SAVE A SERVICE CALL

CHECK THE ITEMS BELOW BEFORE MAKING A SERVICE CALL. YOU MAY BE CHARGED FOR SERVICE IF THE FAULT IS NOT RELATED TO THE WATER HEATER MANUFACTURE OR PARTS SUPPLIED WITH THE WATER HEATER BY RHEEM.

WATER DISCHARGING FROM VALVE DRAINS

It is normal for the cold water expansion valve and the relief valve to discharge a small quantity of water during the heating cycle. However, if either of these valves discharges continually or more than a bucket full of water in 24 hours it may indicate that a valve needs service or replacement. Contact a Rheem Service Centre.

NOT ENOUGH HOT WATER (or no hot water)

- **Is the electricity turned on?**

Check the switch marked 'water heater' at the switchboard and the water heater isolating switch.

Check the fuse marked 'water heater'.

WHERE THE WATER HEATER IS CONNECTED TO AN OFF PEAK (NIGHT RATE) ELECTRICAL TARIFF, THE SUPPLY MAY NOT BE AVAILABLE AT CERTAIN TIMES OF THE DAY OR NIGHT.

- **Do you have the correct size water heater for your requirements?**

Refer to the sizing guide in the Rheem sales literature or the Rheem website.

- **Is one outlet (especially the shower) using more hot water than you think?**

Carefully review the family's hot water usage and if necessary, check the shower flow rate.

For maximum efficiency we recommend the flow rate through the shower is between 8 to 10 litres per minute. This can be achieved by installing a flow control valve if provision is not made to fit a flow restrictor in the shower rose.

- **Ensure the thermostat setting is appropriate**

Note some models require an authorised person to make thermostat adjustments.

HIGH ELECTRICITY BILLS

- **Is one outlet (especially the shower) using more hot water than you think?** (see above).

- **Is there a leaking hot water pipe, dripping hot water tap, etc?**

Even a small leak will waste a surprisingly large quantity of hot water and energy. Service dripping taps, and have your plumber rectify any leaking pipe-work.

- **Is the cold water expansion valve discharging too much water?**

- **Consider recent changes to your hot water usage pattern and check if there has been an increase in tariffs since your previous account.**

INSTALLATION

Please take careful notice of the advice given as Rheem New Zealand Limited will not be liable for any loss or damage suffered as a result of the incorrect installation of the water heater, or any failure to check the capability of the electrical supply and wiring to the water heater.

The water heater must be installed and serviced by a certified person or registered plumber and the installation must comply with the New Zealand Building Code G12, Rheem Installation Instructions, AS/NZS 3000 Electrical Installations and all local codes and regulatory authority requirements. Please note also that no warranty costs will be payable where the water heater is located in a position that does not comply with the Rheem water heater installation instructions or relevant statutory requirements, causing the need for major dismantling or removal of cupboards, doors or walls, or use of special equipment to bring the water heater to floor or ground level or to a serviceable position.

- **WATER HEATER LOCATION**

Rheem electric water heaters with a galvanised outer casing are only suitable for indoor installations, whereas water heaters with a factory painted casing are suitable for both indoor and outdoor installations. Outdoor models must be installed on a hard, level base and feet must be used between the bottom of the water heater and the base.

Clearance must be allowed for servicing and removal of the water heater and it must be accessible without the use of a ladder or scaffold. Adequate clearance must be provided for: cold water expansion valve removal, element cover and element removal, and anode removal and replacement. Also, the information on the rating label must remain readable once installed.

- **WATER SUPPLY PRESSURE**

Maximum inlet water pressure: 120kPa.

- **CONNECTION SIZES**

Hot and Cold water connection: RP ¾ / 20.

- **INLET/OUTLET CONNECTIONS**

Unions must always be provided at the cold water inlet, hot water outlet and at any additional connections to allow for removal of the water heater should it be required. All connection sockets on the water heater are parallel threaded and therefore tapered brass nipples must be used to ensure watertight connections. Parallel brass nipples must not be used and could invalidate warranty. Both connections are fitted with plastic liners and it is important that they remain in situ for the water heater to function properly. These liners will be pushed into the correct position as the fitting is being screwed in.

- **NON RETURN VALVE**

A non-return valve must be installed on the cold water line to the water heater.

- **PIPE SIZES**

The cold water line to the water heater should be the same size or bigger than the hot water line from the water heater. For best results, choose the most suitable pipe size for each individual application.

- **COLD WATER EXPANSION VALVE**

A cold water expansion valve must be fitted to the cold water line to the water heater including open vented systems in frost prone areas.

- **RELIEF VALVE**

For closed (valve vented) installations a pressure relief valve must be fitted. The valve drain pipe must be the same size or larger than the valve outlet. The drain must run downwards to a visible point outside the house, preferably over a gully trap. In locations where the pipe exceeds 3 metres unbroken length or freezing could occur, an air break must be provided within 300mm of the relief valve.

- **SPACE REQUIREMENTS**

See product labelling for specific dimensions of space for installation.

- **PRESSURE REDUCING VALVE**

If the water supply pressure exceeds the rated pressure, a pressure reducing valve is to be fitted in the installation.

- **SAFE TRAY AND SEISMIC RESTRAINT**

The water heater must be installed with a properly drained safe tray where there is the possibility of water damage to furniture, carpets or building. All water heaters must be restrained to protect against seismic forces. (Refer to the New Zealand Building Code for Acceptable Solutions.)

DIAGRAM 1 – TYPICAL VALVE VENTED INSTALLATION

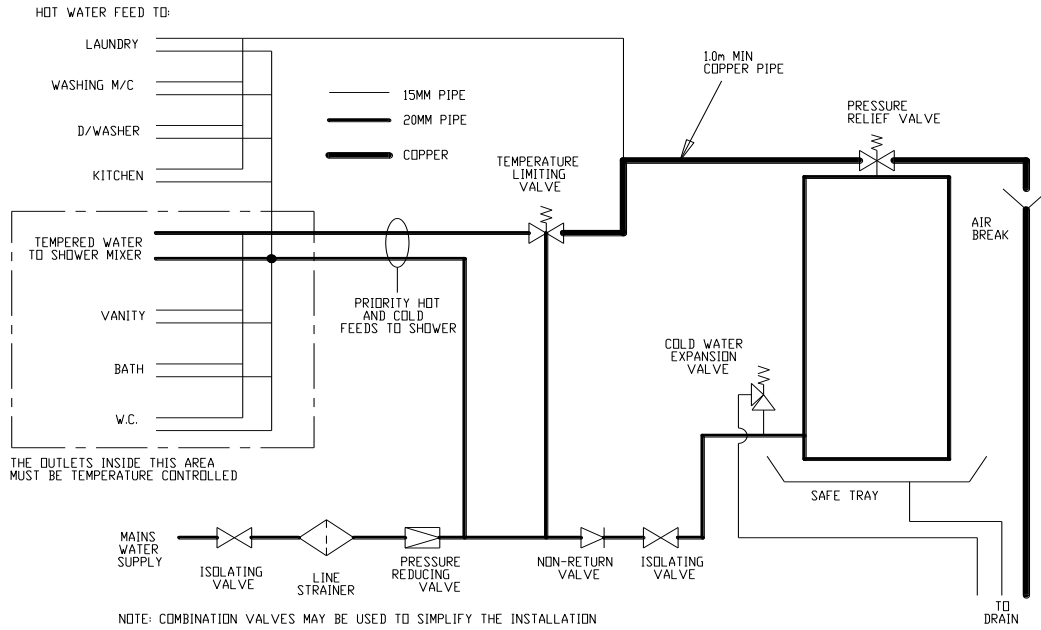

DIAGRAM 2 – TYPICAL OPEN VENTED INSTALLATION

- ⚠ **Warning: For closed (valve vented) installations** a pressure relief valve must be fitted in the installation. Relief valve rating 7 kW minimum. Refer main label for pressure rating. The valve or drain valve outlet pipe must not be sealed or blocked. The first metre of drain line from the relief valve must be in copper.
- ⚠ **Warning: For open vented installations** the vent pipe must not be sealed or blocked.
- ⚠ **Warning: For Push Through (Open Outlet) installations** the outlet acts as a vent and must only be connected to a fitting recommended by the manufacturer. It must not be connected to a tap.

On the drawing above page 6 in frost prone areas a cold water expansion valve must be installed as per New Zealand Building Code G12.

CONNECTIONS - ELECTRICAL

The electrical installation must be completed in accordance with AS/NZS3000. All water heaters are designed for 230VAC, 50 Hz mains operation and a means of disconnection from the power supply must be incorporated in the fixed wiring during installation. A flexible 20mm conduit is required for the electrical cable to the water heater. The conduit is to be connected to the unit with a 20 mm plain to screw adaptor. Connect the power supply wires directly to the terminal block and earth tab connection, ensuring there are no excess wire loops inside the front cover. For details, refer to the wiring diagram on the inside of the element cover. **A separate heating element earth wire is not required because the element earths by the thread of the element boss or flange being in contact with the element socket.**

COMMISSIONING

TO FILL AND TURN ON THE WATER HEATER

 **Warning:** *The power supply to the water heater must not be switched on until the water heater is filled with water and an “Earth Continuity Test”, as outlined in Annex A of AS/NZS60335.1, has been carried out. Failure to do so will damage the element and shorten its life and may create a dangerous situation.*

- Open all the hot water taps in the house (don't forget the shower). Open the cold water isolation valve fully to the water heater to force the air out of the taps. As water flows freely from each tap, close it. Check the pipe-work for leaks.
- Switch on the electrical supply at the isolating switch to the water heater.

TO TURN OFF THE WATER HEATER

If it is necessary to turn off the water heater on completion of the installation, such as on a building site or where the premises is vacant, then;

- Switch off the electrical supply at the isolating switch to the water heater.
- Close the cold water isolation valve at the inlet to the water heater.

DRAINING THE WATER HEATER

- Switch off the electrical supply at the isolation switch to the water heater.
- Close the cold water isolation valve.
- Open all hot water taps and then for closed (valve vented) installations open the union at the top outlet to allow air into the water heater and water to flow out.
- Open the water heater drain valve or remove the drain plug.

WHAT YOU SHOULD KNOW ABOUT WATER QUALITY

Your Rheem water heater is manufactured to suit the water condition of most local authority water supplies. However, some water supplies can have a detrimental effect on the water heater and its operation and/or life expectancy. If you are unsure of your water quality, you can obtain information from your local water supply authority.

HARSH WATER AREAS

Rheem water heaters are designed for use in areas where the Total Dissolved Solids (TDS) content of the water supply is less than 2500mg/L.

In areas where the TDS exceeds 600mg/L it is possible the standard magnesium anode fitted to the water heater may be excessively active. To alleviate this, the magnesium anode should be replaced with an aluminium anode. Where the TDS of the water is less than 40mg/L, such as when the water has been deionised or is from an alpine supply, a high potential anode should be used. The changing of anodes must be carried out by a plumber or qualified service person. Refer to the table below;

ANODE TYPES

Anode Colour Code	Material	Total Dissolved Solids (TDS content)
Green	Magnesium	0-40 mg/L
Black (standard)	Magnesium/Zinc	41-600 mg/L
Blue	Aluminium	601-2500 mg/L

CAUTION

If your water supply has a TDS greater than 600mg/L and the anode has not been changed, there is a possibility of hydrogen gas accumulating in the top of the water heater during long periods of no use.

If, under these conditions, the water heater has not been used for two or more weeks the following procedure should be carried out before using any electrical appliances (e.g. automatic washing machines and dishwashers) which are connected to the hot water supply.

The hydrogen, which is highly flammable, should be vented safely by opening a hot tap and allowing the water to flow. There should be no smoking or naked flames near the tap whilst it is turned on. Any hydrogen gas will be dissipated as indicated by an unusual spurting of the water from the tap. Once the water runs freely again any hydrogen in the system will have been released.

SATURATION INDEX

The saturation index is used as a measure of the water's corrosive or scaling properties. In a scaling water supply calcium carbonate is deposited out of the water onto any hot metallic surface. When scaling water has a saturation index greater than +0.40 an expansion control valve must be fitted on the cold water line after the non-return valve.

Where the saturation index exceeds +0.80, low watts density elements should be used. Where the saturation index is less than -1.0, a corrosive resistant heating unit should be used (contact your local Rheem Service Department or an authorised service person).

WATER HEATERS NOT INSTALLED IN ACCORDANCE WITH THE ABOVE ADVICE WILL NOT BE COVERED BY THE RHEEM WARRANTY.

NOTES

WARRANTY

LOW PRESSURE VITREOUS ENAMEL ELECTRIC WATER HEATER PRODUCT WARRANTY --- NEW ZEALAND ONLY ---

In addition to your legal rights, in New Zealand, Rheem New Zealand Limited makes the following promise to the owner. We will repair or, if necessary, replace a defective water heater or part of it, which has failed due to faulty manufacture on the following terms and conditions:

1. THE RHEEM WARRANTY – GENERAL

- 1.1 This warranty is given in respect of sales in New Zealand by Rheem New Zealand Limited, Company number 1175771, 475 Rosebank Road, Avondale, Auckland.
- 1.2 Rheem offer a trained and qualified national service network that will repair or replace components at the address where the water heater is installed subject to the terms of the Rheem warranty. In New Zealand contact your Rheem Service Centre on 0800 657 335.
- 1.3 For details about this warranty, you can contact us in New Zealand at rheem@rheem.co.nz or phone your Rheem Service Centre on 0800 657 335.
- 1.4 The terms of this warranty are set out in Section 2 and apply to water heaters manufactured after 1st October 2018.
- 1.5 If a subsequent version of this warranty is published, the terms of that warranty will apply to water heaters manufactured after the date specified in the subsequent version.

2. TERMS OF THE RHEEM WARRANTY AND EXCLUSIONS TO IT

- 2.1 The decision of whether to repair or replace a faulty component is at Rheem New Zealand's sole discretion.
- 2.2 Where a failed component or cylinder is replaced under this warranty, the balance of the original warranty period will remain effective. The replacement does not carry a new Rheem New Zealand Limited warranty.
- 2.3 Where the water heater is installed outside the boundaries of a metropolitan area as defined by Rheem New Zealand Limited or further than 25km from a Rheem New Zealand Limited Service Centre's office, the cost of transport, insurance and travelling between the Rheem New Zealand Limited Service Centre's office and the installed site shall be the owner's responsibility.
- 2.4 Where the water heater is installed in a position that does not allow safe or ready access, the cost of that access, including the cost of additional materials handling and/or safety equipment, shall be the owner's responsibility. In other words, the cost of dismantling or removing cupboards, doors or walls and the cost of any special equipment to bring the water heater to floor or ground level, or to a serviceable position is not covered by this warranty.
- 2.5 This warranty only applies to the original and genuine Rheem New Zealand Limited's water heater in its original installed location and any genuine Rheem replacement parts.
- 2.6 The Rheem New Zealand Limited warranty does not cover faults that are a result of:
 - a) Accidental damage to the water heater or any component (for example:
 - (i) Acts of God such as floods, storms, fires, lightning strikes and the like; and
 - (ii) Third party acts or omissions).
 - b) Misuse or abnormal use of the water heater.
 - c) Installation or use not in accordance with the Owner's Guide and Installation Instructions or with relevant statutory and local requirements (including failure to install a properly drained safe tray where required by the Owner's Guide and Installation Instructions).
 - d) Connection at any time to a water supply that does not comply with the water supply guidelines as outlined in the Owner's Guide and Installation Instructions, or poor water quality outside the limits specified in the Owner's Guide and Installation Instructions.
 - e) Service or repair work, attempts to repair or modifications to the water heater by a person other than Rheem Service or a Rheem Service Centre.
 - f) Faulty plumbing or faulty power supply.
 - g) Failure to maintain the water heater in accordance with the Owner's Guide and Installation Instructions.
 - h) Transport damage.
 - i) Fair wear and tear from adverse conditions (for example, corrosion).
 - j) Cosmetic defects.

- 2.7 If you require a call out and we find that the fault is not covered by the Rheem warranty, you are responsible for the Rheem Service Centre's call out cost. If you wish to have the relevant component repaired or replaced by Rheem that service will be at your cost.
- 2.8 Subject to any statutory provisions to the contrary, this warranty excludes any and all claims however arising, including under contract or tort, for damage to furniture, carpet, walls, foundations or any other consequential loss or incidental expenses either directly or indirectly due to leakage from the Rheem water heater, or due to leakage from fittings and/ or pipe work of metal, plastic or other materials caused by water temperature, workmanship or other modes of failure that were not reasonably foreseeable as liable to result from the failure.
- 2.9 This warranty excludes to the extent permissible all implied warranties set out in the Sale of Goods Act 1908 (New Zealand) and all guarantees set out in the Consumer Guarantees Act 1993 (New Zealand) to the extent that the goods are acquired for the purpose of resupply in trade, consumption in the course of a process of production or manufacture or repairing or treating in trade other goods or fixtures on land.

3. WHAT IS COVERED BY THE RHEEM WARRANTY FOR THE WATER HEATERS DETAILED IN THIS DOCUMENT

- 3.1 Rheem will repair or replace a faulty component of your unit if it fails to operate in accordance with its specifications as follows:

Warranty Cover	The period from date of installation, in which the fault must appear, in order to be covered		*Domestic use is defined as; when the appliance is installed in a single family domestic dwelling.
What components are covered	Domestic use*	Non-domestic use*	What coverage you receive

Low Pressure	Years		** (Excludes Optima)
All components	1	1	Repair or replacement of failed component, or if necessary, replacement of the complete water heater, free of charge, including labour.
Cylinder only (Thermostat setting must be below 70°C)	5	1	Repair or replacement of the complete water heater, free of charge, including labour.
Cylinder only (Thermostat setting must be below 70°C)	10	3	Repair or replacement of the complete water heater, free of charge. Installation and labour cost are the responsibility of the owner.

4. ENTITLEMENT TO MAKE A CLAIM UNDER THIS WARRANTY

- 4.1 To be entitled to make a claim under this warranty you need to:
- Be the owner of the water heater or have consent of the owner to act on their behalf.
 - Contact Rheem Service without undue delay after detection of the defect and, in any event, within the applicable Rheem warranty period.
- 4.2 You are **not** entitled to make a claim under this Rheem warranty if your water heater:
- Does not have its original serial numbers or rating labels.
 - Is not installed in New Zealand.

5. HOW TO MAKE A CLAIM UNDER THIS WARRANTY

- 5.1 If you wish to make a claim under this warranty, you need to:
- Contact Rheem on 0800 657 335 and provide owner's details, address of the water heater, a contact number and date of installation of the water heater or if that's unavailable, the date of manufacture and serial number (from the rating label on the water heater).

- b) Rheem will arrange for the water heater to be assessed on-site and may require the unit to be removed and returned to the factory for further testing.
- c) If Rheem determines that you have a valid warranty claim, Rheem will repair or replace the water heater in accordance with this warranty.

5.2 Any expenses incurred in the making of a claim under this warranty will be borne by you.

6. THE CONSUMER GUARANTEES ACT 1993 (NEW ZEALAND)

- 6.1 Our goods come with guarantees that cannot be excluded under the Consumer Guarantees Act 1993 (New Zealand). If the goods fail to comply with the applicable guarantees set out under the Consumer Guarantees Act 1993 (New Zealand) being the guarantee as to acceptable quality, the guarantee as to correspondence with description or the guarantee as to repair and parts, or if the goods fail to comply with any express guarantee given by Rheem, then you are entitled to a replacement or refund and for compensation for any other reasonably foreseeable loss or damage.
- 6.2 The Rheem warranty (set out above) is in addition to any rights and remedies that you may have under the Consumer Guarantees Act 1993 (New Zealand)
